Caution for using

- Power circuit for ATS 11 Timer is designed without using a transformer. For the power of sensor, therefore, use isolation transformer which is not grounded on secondary side in order to cut off the unnecessary current flow as shown in Figure 1.
- Please use the terminal ② as the common terminal as shown in Figure 3. If use the terminal ⑩ as common terminal as shown in Figure 2, it might cause damage to inner circuit of ATS11Timer.
- Please connect DC power input after checking polarity of power.
- In case of 12VDC/24VAC/24VDC model, isolated and limited voltage/current or Class 2 sources should be provided for power supply.
- When applying the power to the timer, please apply the rated power at the moment by switch, relay, etc. Otherwise it might cause malfunction.
- When supplying the power to the timer, connection as shown in Figure 4. It might cause malfunction due to leakage current though resistance (R) and condenser (C). Please connect R and C as shown in Figure 5 to prevent malfunction as shown in Figure 5.
- In order to apply input signals(START, RESET, INHIBIT), short-circuit the terminal no. ②-⑤, ③-⑥ or ②-⑦. It may cause internal circuit damage by wrong connections.
- Do not wire START, RESET, INHIBIT signal input line with power line, high voltage line in parallel.
- It might cause malfunction if change the setting time, time range or operation mode during unit operating. Please change the setting time, time range or operation mode after cut the power off.
- Do not use this unit at below places.
 - Place where there are severe vibration or impact.
 - Place where strong alkalis or acids are used.
 - Place where there are direct ray of the sun.
 - Place where strong magnetic field or electric noise are generated.
- Installation environment
 - It shall be used indoor
 - Altitude Max. 2000m
