

# SHP350 Series

- 420 W High Line Output Power
- Rugged Industrial Construction
- Variable Speed Fan for Noise Reduction
- -40 °C to +70 °C Operation
- 5 V Standby
- AC OK, Remote On/Off and Active Current Share
- Screw Terminals
- SEMI F47 Compliant
- 3 Year Warranty

The SHP350 AC-DC power supply provides upto 420 W of output power in a compact rugged mechanical package, suitable for a range of industrial applications.

The unit comprises of a main output with voltages from 12-48 VDC and a 5 VDC standby supply which can be utilised with the signals and control features of the unit to provide detection of loss of AC input and remote on/off control.

Multiple units can be used in parallel via the current share facility, providing higher power solutions. Inherently low earth leakage current, and conducted EMC compliance to Class B also simplify higher power system design.

Packaged in a compact 7" (178 mm) x 3.6" (91 mm) x 2.1" (53 mm) and carrying IEC60950 family safety approvals, the SHP350 has a load dependant variable speed fan, is fully protected with overtemperature shutdown and provides -40 °C start up and full power from -20 °C to 50 °C and 50% power at +70 °C.

## Models and Ratings

| Output Voltage V1 | Output Current V1 | Standby Supply V2 | Output Power |       | Model Number |
|-------------------|-------------------|-------------------|--------------|-------|--------------|
|                   |                   |                   | Continuous   | Peak  |              |
| 12 V              | 26.5 A            | 5 V / 0.2 A       | 318 W        |       | SHP350PS12   |
| 15 V              | 22.0 A            | 5 V / 0.2 A       | 330 W        |       | SHP350PS15   |
| 24 V              | 14.5 A            | 5 V / 0.2 A       | 348 W        | 417 W | SHP350PS24   |
| 28 V              | 12.5 A            | 5 V / 0.2 A       | 350 W        | 420 W | SHP350PS28   |
| 36 V              | 9.7 A             | 5 V / 0.2 A       | 350 W        | 420 W | SHP350PS36   |
| 48 V              | 7.3 A             | 5 V / 0.2 A       | 350 W        | 420 W | SHP350PS48   |

## Input Characteristics

| Remote Sense                   | Compensates for 0.5 V total voltage drop                                                                                                                                                                                                                                                                                                                                                                            |
| AC OK / Power Fail             | Open collector referenced to negative sense, transistor normally off when AC is good (see fig. 5 & 8)<br>AC OK: Provides ≥ 5 ms warning of loss of output from AC failure                                                                                                                                                                                                                                           |
| Remote On/Off (Inhibit/Enable) | Uncommitted isolated optocoupler diode, powered diode inhibits both V1 & V2 (fan supply) (see fig.6 & 9)                                                                                                                                                                                                                                                                                                            |
| Current Share                  | When more than one unit (with the same output voltage) is used in parallel to increase output current, the current share pins 5/6 of one unit should be connected to pins 5/6 of the other unit(s). This will force the current to share between the outputs. Similarly pins 2/4 of each unit should also be connected as a ground reference. Units share current within 10% of each other at full load. See fig 7. |
| Standby Supply V2              | Isolated 5 V/0.2 A supply, always present when AC supplied.                                                                                                                                                                                                                                                                                                                                                         |

## Mechanical Details

### Notes:

- Dimensions shown in inches (mm).
- Weight: 1.73 lb (0.788 kg).

- Logic connector J3 mates with JST housing PHDR-10VS and SPHD-001T-P0.5 Crimp Terminals

# SHP650 Series

- Rugged Industrial Construction
- End Fan, Top Fan & U'Channel Mechanical Options
- -40 °C to +70 °C Operation
- 5 V Standby
- AC OK, Remote On/Off and Active Current Share
- Load Dependant Variable Fan Speed
- Screw Terminals
- SEMI F47 Compliant
- 3 Year Warranty

The SHP650 AC-DC power supply provides upto 650 W of output power in three mechanical packages to provide installation flexibility in a range of industrial applications.

The unit comprises of a main output with voltages from 12-48 VDC and two peripheral outputs providing a 12 VDC fan supply and a 5 VDC standby supply which can be utilised with the signals and control features of the unit to provide detection of loss of AC input and remote on/off control.

Multiple units can be used in parallel via the current share facility, providing higher power solutions. Inherently low earth leakage current, and conducted EMC compliance to Class B also simplify higher power system design.

Packaged in a compact 8" (203 mm) x 4" (102 mm) x 2.6" (65 mm) and carrying IEC60950 family safety approvals, the SHP650 has a load dependant variable speed fan which is fully protected with overtemperature shutdown and provides full power from -20 °C to 50 °C and 50% power at +70 °C.

## Models and Ratings

### End Fan Models (-EF)

| Output Voltage V1 | Max Output Current V1 | Fan Supply V2 | Standby Supply V3 | Max Output Power | Model Number  |
|-------------------|-----------------------|---------------|-------------------|------------------|---------------|
| 12 V              | 50.0 A                | Not Available | 5 V / 0.2 A       | 607 W            | SHP650PS12-EF |
| 15 V              | 40.0 A                | Not Available | 5 V / 0.2 A       | 607 W            | SHP650PS15-EF |
| 24 V              | 27.0 A                | Not Available | 5 V / 0.2 A       | 657 W            | SHP650PS24-EF |
| 28 V              | 23.0 A                | Not Available | 5 V / 0.2 A       | 651 W            | SHP650PS28-EF |
| 36 V              | 18.0 A                | Not Available | 5 V / 0.2 A       | 657 W            | SHP650PS36-EF |
| 48 V              | 13.5 A                | Not Available | 5 V / 0.2 A       | 657 W            | SHP650PS48-EF |

### Top Fan Models (-TF)

| Output Voltage V1 | Max Output Current V1 | Fan Supply V2 | Standby Supply V3 | Max Output Power | Model Number  |
|-------------------|-----------------------|---------------|-------------------|------------------|---------------|
| 12 V              | 50.0 A                | Not Available | 5 V / 0.2 A       | 607 W            | SHP650PS12-TF |
| 15 V              | 40.0 A                | Not Available | 5 V / 0.2 A       | 607 W            | SHP650PS15-TF |
| 24 V              | 27.0 A                | Not Available | 5 V / 0.2 A       | 657 W            | SHP650PS24-TF |
| 28 V              | 23.0 A                | Not Available | 5 V / 0.2 A       | 651 W            | SHP650PS28-TF |
| 36 V              | 18.0 A                | Not Available | 5 V / 0.2 A       | 657 W            | SHP650PS36-TF |
| 48 V              | 13.5 A                | Not Available | 5 V / 0.2 A       | 657 W            | SHP650PS48-TF |

### U Channel Models

| Output Voltage V1 | Max Output Current V1 | Fan Supply V2 | Standby Supply V3 | Max Output Power <sup>(1)</sup> | Model Number |
|-------------------|-----------------------|---------------|-------------------|---------------------------------|--------------|
| 12 V              | 50.0 A                | 12 V / 0.5 A  | 5 V / 0.2 A       | 601 W                           | SHP650PS12   |
| 15 V              | 40.0 A                | 12 V / 0.5 A  | 5 V / 0.2 A       | 601 W                           | SHP650PS15   |
| 24 V              | 27.0 A                | 12 V / 0.5 A  | 5 V / 0.2 A       | 651 W                           | SHP650PS24   |
| 28 V              | 23.0 A                | 12 V / 0.5 A  | 5 V / 0.2 A       | 655 W                           | SHP650PS28   |
| 36 V              | 18.0 A                | 12 V / 0.5 A  | 5 V / 0.2 A       | 651 W                           | SHP650PS36   |
| 48 V              | 13.5 A                | 12 V / 0.5 A  | 5 V / 0.2 A       | 651 W                           | SHP650PS48   |

1. U Channel models require a minimum of 5.5 m/s airflow from the system for cooling

## Signals & Control

| Characteristic                 | Notes & Conditions                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Signals &amp; Control</b>   |                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Remote Sense                   | Compensates for 0.5 V total voltage drop                                                                                                                                                                                                                                                                                                                                                                            |
| AC OK / Power Fail             | Open collector referenced to negative sense, transistor normally off when AC is good (see fig. 5 & 8)<br>AC OK: Provides ≥ 5 ms warning of loss of output from AC failure                                                                                                                                                                                                                                           |
| Remote On/Off (Inhibit/Enable) | Uncommitted isolated optocoupler diode, powered diode inhibits both V1 & V2 (fan supply) (see fig.6 & 9)                                                                                                                                                                                                                                                                                                            |
| Current Share                  | When more than one unit (with the same output voltage) is used in parallel to increase output current, the current share pins 5/6 of one unit should be connected to pins 5/6 of the other unit(s). This will force the current to share between the outputs. Similarly pins 2/4 of each unit should also be connected as a ground reference. Units share current within 10% of each other at full load. See fig 7. |
| Standby Supply V3              | Isolated 5 V/0.2 A supply, always present when AC supplied.                                                                                                                                                                                                                                                                                                                                                         |

## Thermal Considerations (U Channel)

| Temperature Measurements (Ambient $\leq 50^{\circ}\text{C}$ ) |                                            |                                        |
|---------------------------------------------------------------|--------------------------------------------|----------------------------------------|
| Component                                                     | Recommended Temperature $^{\circ}\text{C}$ | Maximum Temperature $^{\circ}\text{C}$ |
| C55 Capacitor                                                 | 70                                         | 105                                    |
| T302 Transformer                                              | 90                                         | 120                                    |
| C314 Capacitor                                                | 70                                         | 105                                    |
| D311 Diode                                                    | 100                                        | 120                                    |

In order to ensure reliable operation in the end use application the recommended component temperatures listed should not be exceeded. Higher temperatures up to the maximum stated can be used but product lifetime may be reduced.

# SHP1000 Series

- 1200 W High Line Output Power
- Rugged Industrial Construction
- Variable Speed Fan for Noise Reduction
- -40 °C to +70 °C Operation
- 5 V Standby
- AC OK, Remote On/Off and Active Current Share
- Screw Terminals
- 3 Year Warranty

The SHP1000 AC-DC power supply provides up to 1200 W of output power in a compact rugged mechanical package, suitable for a range of industrial applications.

The unit comprises of a main output with voltages from 12-48 VDC and a 5 VDC standby supply which can be utilised with the signals and control features of the unit to provide detection of loss of AC input and remote on/off control.

Multiple units can be used in parallel via the current share facility, providing higher power solutions. Inherently low earth leakage current, and conducted EMC compliance to Class B also simplify higher power system design.

Packaged in a compact 9.5" (241 mm) x 5.9" (150 mm) x 2.4" (61 mm) and carrying IEC60950 family safety approvals, the SHP1000 has a load dependant variable speed fan is fully protected with overtemperature shutdown and provides -40 °C start up with full power from -20 °C to 50 °C and 50% power at +70 °C.

## Models and Ratings

| Output Voltage V1 | Max Output Current V1 |          | Standby Supply V2 | Max Output Power |          | Model Number |
|-------------------|-----------------------|----------|-------------------|------------------|----------|--------------|
|                   | <180 VAC              | >180 VAC |                   | <180 VAC         | >180 VAC |              |
| 12 V              | 83.0 A                |          | 5 V / 1.0 A       | 1001 W           |          | SHP1000PS12  |
| 15 V              | 67.0 A                |          | 5 V / 1.0 A       | 1010 W           |          | SHP1000PS15  |
| 24 V              | 42.0 A                | 50.0 A   | 5 V / 1.0 A       | 1013 W           | 1205 W   | SHP1000PS24  |
| 28 V              | 36.0 A                | 42.9 A   | 5 V / 1.0 A       | 1013 W           | 1206 W   | SHP1000PS28  |
| 36 V              | 28.0 A                | 33.3 A   | 5 V / 1.0 A       | 1013 W           | 1204 W   | SHP1000PS36  |
| 48 V              | 21.0 A                | 25.0 A   | 5 V / 1.0 A       | 1013 W           | 1205 W   | SHP1000PS48  |

## Input Characteristics

| Characteristic                     | Minimum                                 | Typical  | Maximum | Units | Notes & Conditions                             |

| <b>Signals &amp; Control</b>   |                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Remote Sense                   | Compensates for 0.5 V total voltage drop                                                                                                                                                                                                                                                                                                                                                                            |
| AC OK / Power Fail             | Open collector referenced to negative sense, transistor normally off when AC is good (see fig. 5 & 8)<br>AC OK: Provides ≥ 5 ms warning of loss of output from AC failure                                                                                                                                                                                                                                           |
| Remote On/Off (Inhibit/Enable) | Uncommitted isolated optocoupler diode, powered diode inhibits both V1 & V2 (fan supply) (see fig.6 & 9)                                                                                                                                                                                                                                                                                                            |
| Current Share                  | When more than one unit (with the same output voltage) is used in parallel to increase output current, the current share pins 5/6 of one unit should be connected to pins 5/6 of the other unit(s). This will force the current to share between the outputs. Similarly pins 2/4 of each unit should also be connected as a ground reference. Units share current within 10% of each other at full load. See fig 7. |
| Standby Supply V2              | Isolated 5 V/1.0 A supply, always present when AC supplied.                                                                                                                                                                                                                                                                                                                                                         |
