I_H = Hold current-maximum current at which the device will not trip at 23°C still air.

I_T = Trip current-minimum current at which the device will always trip at 23°C still air.

V_{MAX} = Maximum voltage device can withstand without damage at its rated current (I maximum).

I_{MAX} = Maximum fault current device can withstand without damage at rated voltage (V maximum).

P_D = Typical power dissipated-type amount of power dissipated by the device when in the tripped state in 23°C still air environment.

R_{Min} = Minimum device resistance at 23°C prior to tripping.

R_{1Max} = Maximum device resistance at 23°C measured 1 hour after tripping or reflow soldering of 260°C for 20 seconds.

Termination pad characteristics

Termination pad materials: Pure tin.

Note 1: All temperatures refer to of the package, measured on the package body surface.

Solder reflow

Due to "Lead Free" nature, Temperature and Dwelling time for the soldering zone is higher than those for Regular. This may cause damage to other components.

1. Recommended max past thickness > 0.25mm.
2. Devices can be cleaned using standard methods and aqueous solvent.
3. Rework use standard industry practices.
4. Storage Environment : < 30°C/60%RH.
