

Features

Range of modular DC power supplies

- High efficiency (up to 91%)
- Low (< 0.4 W) stand-by power absorption
- Thermal protection: internal, with V_{out} shutdown
- Short circuit protection: hiccup (auto-recovery) mode
- Input protection: replaceable internal fuse plus spare (78.36)
- Overvoltage protection: varistor
- Flyback topology
- Compliant to EN 60950-1 and EN 61204-3
- Parallel working for automatic redundancy: with OR-IN diode
- Dual and series connection permissible
- Small dimensions: 17.5 mm (1 module) or 70 mm (4-modules) wide, 60 mm deep
- 35 mm rail (EN 60715) mount

Screw terminal

Power lost to the environment	without output current	W	0.4	
	with rated output current	W	2 (78.12), 5 (78.36, 78.50), 5.4 (78.60)	

* input fuse may blow for surges higher than 1.5 kV

Output specification

L78-1 Output current v ambient temperature (78.12)

P78-1 Output peak current v time (78.12)

L78-2 Output current v ambient temperature (78.36)

P78-2 Output peak current v time (78.36)

L78-3 Output current v ambient temperature (78.60)

P78-3 Output peak current v time (78.60)

L78-4 Output current v ambient temperature (78.50)

P78-4 Output peak current v time (78.50)

Hiccup mode

Under normal conditions, the 78 Series Power Supply supplies the current required by the load.

However, under abnormal conditions such as a short circuit or heavy overload (T_0) the output voltage will be rapidly reduced to zero - followed by the current (T_1). After approximately 2 seconds (T_1 to T_2), the power supply checks for the persistence of the anomaly over the time period T_2 to T_3 (30 to 100ms - dependent on the type of anomaly). If the anomaly persists, as shown above, the current is again reset to 0 A for a further 2 s (T_3 to T_4). This "hiccup" process is repeated until the anomaly is removed (T_n), whereon the power supply then returns to normal working.

Fold-back mode (78.50 only)

Under normal conditions, the 78.50 supplies the current required by the load.

In case of **heavy overload** (up to 110 W / 9.2 A), the fold-back circuit will limit the output current linearly as output voltage decreases, in accordance to the diagram above.

In practice, when overcurrent is drawn by the load, the fold-back circuit reduces both the output voltage and current to well below the normal operating limits.

In case of **short circuit**, the power supply will work in hiccup mode.

Both these conditions end when the anomaly is removed, whereon the power supply then returns to normal working.

The fold-back mode allows to use the 78.50 power supply as a **battery charger**, particularly for charging lead batteries rated 15...20 Ah.

It is suggested to insert a diode in series between the + output and the + input of the battery (if not already installed in the battery unit).

Wiring diagrams

Dual connection

Dual connection

Series connection

Series connection

Parallel connection (78.50 only)

Application example: redundancy connection

Manual

Automatic (with parallel connection)

Note: Since parallel working is intended to provide automatic redundancy, rate the load current at no more than I_n .
