Low	No pop	$0 \Omega \leq R_{DOWN} \leq 1 \text{ k}\Omega$	Frequency 4

Notes for both FS/OE tables above:

- If the internal pull-up resistor order option is NOT selected, an MCU internal pull-up resistor or an external pull-up resistor should be used. See data sheet for more information.
- The parallel combination of all pull-up resistors on the FS/OE pin including the optional internal pull-up resistor must be $> 20 \text{ k}\Omega$ to select Weak High.
- If the Si50x internal pull-up resistor is enabled with no other external OE connections, the OE state will be detected as "Weak High", selecting Frequency 2 by default.
