Additional Information

Description

The DA and DB Series transient surge suppressors are heavy-duty industrial Metal-Oxide Varistors (MOVs) designed to provide surge protection for motor controls and power supplies used in oil-drilling, mining, and transportation equipment.

These UL recognized varistors have identical ratings and specifications but differ in case construction to provide flexibility in equipment designs.

DA Series devices feature rigid terminals to ensure secure wire contacts. Both the DA and DB Series feature improved creep and strike distance capability to minimize breakdown along the package surface design that provides complete electrical isolation of the disc subassembly.

See DA/DB Series Device Ratings and Specifications table for part number and brand information.

Features

- High energy absorption capability W_{TM} up to 1050J
- Wide operating voltage range $V_{MIAC/RMS}$ 130V to 750V
- Screw terminals (DA Series), quick connect push-on connectors (DB Series)
- Case design provides complete electrical isolation of disc subassembly
- 40mm diameter disc
- No derating up to 85°C ambient
- RoHS compliant

Absolute Maximum Ratings

• For ratings of individual members of a series, see Device Ratings and Specifications chart

Continuous	DA/DB Series	Units
Steady State Applied Voltage:		
AC Voltage Range ($V_{MIAC/RMS}$)	130 to 750	V
DC Voltage Range (V_{MDC})	175 to 970	V
Transients:		
Peak Pulse Current (I_{TM})		
For 8/20 μ s Current Wave (See Figure 2)	40,000	A
Single Pulse Energy Range		
For 2ms Current Squarewave (W_{TM})	270 to 1050	J
Operating Ambient Temperature Range (T_A)	-55 to +85	°C
Storage Temperature Range (T_{STG})	-55 to +125	°C
Temperature Coefficient (α) of Clamping Voltage (V_C) at Specified Test Current	<0.01	%/°C
Hi-Pot Encapsulation (COATING Isolation Voltage Capability) (Dielectric must withstand indicated DC voltage for one minute per MILSTD 202, Method 301)	5000	V
COATING Insulation Resistance	1000	M Ω

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

DA/DB Series Ratings & Specifications

Part Number Device Branding		Maximum Rating (85°C)				Specifications (25°C)				
		Continuous		Transient		Varistor Voltage at 1mA DC Test Current			Maximum Clamping Volt V_C at 200A Current (8/20 μ s)	Typical Capaci- tance $f =$ 1MHz
		V_{RMS}	V_{DC}	Energy (2ms)	Peak Current 8 x 20 μ s					
		$V_{M(AC)}$	$V_{M(DC)}$	W_{TM}	I_{TM}	Min	V_{NOM}	Max	V_C	C

V751DA40	V751DB40	750	970	1050	40000	1080	1200	1320	2000	1800

Note : Average power dissipation of transients not to exceed 2.0W.

Power Dissipation Ratings

Should transients occur in rapid succession, the average power dissipation required is simply the energy (watt- seconds) per pulse times the number of pulses per second. The power so developed must be within the specifications shown on the Device Ratings and Specifications table for the specific device. Furthermore, the operating values need to be derated at high temperatures as shown above. Because varistors can only dissipate a relatively small amount of average power they are, therefore, not suitable for repetitive applications that involve substantial amounts of average power dissipation.

Peak Pulse Current Test Waveform

O_1 = Virtual Origin of Wave

T = Time from 10% to 90% of Peak

T_1 = Rise Time = $1.25 \times T$

T_2 = Decay Time

Example - For an 8/20 μ s Current Waveform:

$8\mu s = T_1$ = Rise Time

$20\mu s = T_2$ = Decay Time

Maximum Clamping Voltage

V131DA40 - V751DA40 and V131DB40 - V751DB40

NOTE: If pulse ratings are exceeded, a shift of V_{NDCI} (at specified current) of more than +/-10% could result. This type of shift, which normally results in a decrease of V_{NDCI} , may result in the device not meeting the original published specifications, but it does not prevent the device from continuing to function, and to provide ample protection.

Repetitive Surge Capability

V131DA40 - V751DA40 and V131DB40 - V751DB40

Physical Specifications

Lead Material	DA - Copper, Tin-plated DB - Brass, Tin-plated
Insulating Material	Cured, flame retardant epoxy polymer meets UL94V-0 requirements.
Device Labeling	Marked with LF, part number and date code

Environmental Specifications

Operating Temperature	-55°C to +85°C
Storage Temperature	-55°C to +125°C
Humidity Aging	+85°C, 85% RH, 1000 hours +/- 5% typical resistance change
Thermal Shock	+85°C to -40°C 10 times +/- 5% typical resistance change
Solvent Resistance	MIL-STD-202, Method 215
Moisture Sensitivity	Level 1, J-STD-020

DA SERIES

Technical drawing of a 15mm diameter M4 international thread nut. The drawing includes a top view showing a 15mm diameter with a 4.3mm (0.170) hole and a 1mm (0.04) gap between the hole and the thread. The side view shows a 62mm (2.44) outer diameter, a 57mm (2.24) inner diameter, and a 4.5mm (0.18) thread height. The thread is labeled "M4 INTERNATIONAL THREAD".
