

| RSF10 SERIES

HIGH LEVEL SWITCH FOR BOILING WATER

The RSF10 series drop float has been designed to eliminate problems associated with limescale build up around the pivot point of a conventional float switch. It is also suitable in more viscous liquids, that might affect the pivot action of a standard float type.

This particular series is primarily for applications where a high level condition has to be monitored.

The drop float actuator allows the switch housing and float pivots to be located above the surface of the liquid and provides a normally closed switch contact, opening as the liquid level rises.

They are manufactured in a range of materials, with a choice of gasket material, to suit most commonly used liquids.

Typical applications include wall kettles and hot vending machines.

Versions available with either flying leads or M12 circular connector.

There are cable sets available for use with M12 connector versions.

Features

- Pivot out of liquid
- High level switch position
- Many WRAS (approved for use in hot & cold water) and NSF approved variants
- Many variants are UL recognised components File No. E171218
- Flying lead or M12 connector
