FUNCTION DIAGRAMS

INSTALLATION AND SETTING

- BEFORE INSTALLATION, ISOLATE THE SUPPLY.
- Connect the unit as required.

Installation work must be carried out by qualified personnel.

Setting the unit.

- Set the "Range" ④ to the required position (depending on whether seconds, minutes or hours are required), then set the "Set %" adjustment ⑤ as required. The "Set %" is a % of the selected range, so 60% of the 1 – 10 hour range will give 6 hours.

Applying power.

- Apply power and the green LED ① will start flashing to indicate timing is in progress. Contacts 15 and 18 will close as soon as power is applied (Instantaneous Relay - RLY1) and the red relay LED ② will illuminate. Contacts 25 and 26 (Timed Relay - RLY2) will remain closed during this period
- At the end of the delay period "t" contacts 25 and 26 will open 25 and 28 will close. The red relay LED ③ will illuminate.
- Both relays will remain in the energised state until power is removed. Re-applying power will repeat the whole process again.

Note:

¹ In accordance with IEC 61812, the green LED is permitted to extinguish during a voltage dip or momentary interruption of the power supply providing the state of the output relay does not change.

² The dip / interruption (reset) duration and levels are defined in the product standard however, the standard allows for these to be different from the levels actually specified.
