1.0 Main Features

| Item | Contents |
|---------------------------|-------------------------------|
| Screen Size | 8.0" Diagonal |
| Display Format | 1600(H) x RGB x 480(V) Dots |
| N° of Colour | 16.7M |
| Active Area | 194.4 mm (H) x 58.32 mm (V) |
| PCT View Area | 195.2mm(H) x 59.12mm (V) |
| LCD Type | TFT |
| Mode | Transmissive / Normally Black |
| Viewing Direction | ALL |
| TFT Interface | 6/8Bit LVDS interface |
| PCT Interface | USB |
| Driver IC | HX8249 & HX8678 |
| PCT Driver IC | FT5926QSM |
| Simultaneous Touch Points | 10 |
| Backlight Type | LED |
| Operating Temperature | -20°C ~ +70°C |
| Storage Temperature | -30°C ~ +80°C |
| RoHS compliant | Yes |

| Pixel Pitch | 121.5 (H) x 121.5 (V) | µm |
| Weight | 173 | g |

2.2 Mechanical Drawing

3.0 Electrical Specification

3.1 Absolute Maximum Ratings

3.1.1 TFT

| Item | Symbol | Condition | Min | Max | Unit | Note |
|--------------------------|--------|-----------|-----|-----|------|-------|
| Power Supply Voltage LCM | VDD | - | 2.8 | 3.6 | V | |
| Operating Temperature | TOP | - | -20 | 70 | °C | 1 |
| Storage Temperature | TST | - | -30 | 80 | °C | 1,2,3 |

Note 1. 90 % RH Max for $T_a < 50^\circ\text{C}$, and 60% RH for $T_a \geq 50^\circ\text{C}$.

Note 2. In case of below 0°C , the response time of liquid crystal (LC) becomes slower and the colour of panel becomes darker than normal one. Level of retardation depends on temperature, because of LC's characteristic.

Note 3. Only operation is guaranteed at operating temperature. Contrast, response time, another display quality are evaluated at $+25^\circ\text{C}$.

3.1.2 PCT

| Item | Symbol | Condition | Min | Max | Unit | Note |
|-----------------------|--------|-----------|-----|-----|------|------|
| Power Supply Voltage | VBUS | - | 4.0 | 6.0 | V | 4 |
| Operating Temperature | TOP | - | -20 | 70 | °C | - |
| Storage Temperature | TST | - | -30 | 80 | °C | - |

Note 4. If used beyond the absolute maximum ratings, FT5926QSM may be permanently damaged. It is strongly recommended that the device be used within the electrical characteristics in normal operations. If exposed to the condition not within the electrical characteristics, it may affect the reliability of the device.

| 40 | LED+ | LED Anode |

Note.1

STBYB=H(3.3V),normal operation.

STBYB=L(GND),timing controller,source driver will turn off,all output are High-Z.

Note.2

Suggest to connection with an RC reset circuit for stability,Normally pull high.

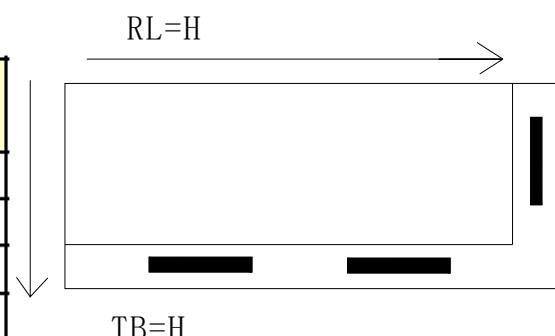

(47KΩ+0.1uF or external MCU control)

Note.3

If LVDS input data is 8 bit,SELB must be set to high.

Note.4

| Scan control | Scan Control Input | | Scanning direction |

3.4.4 Power Sequence

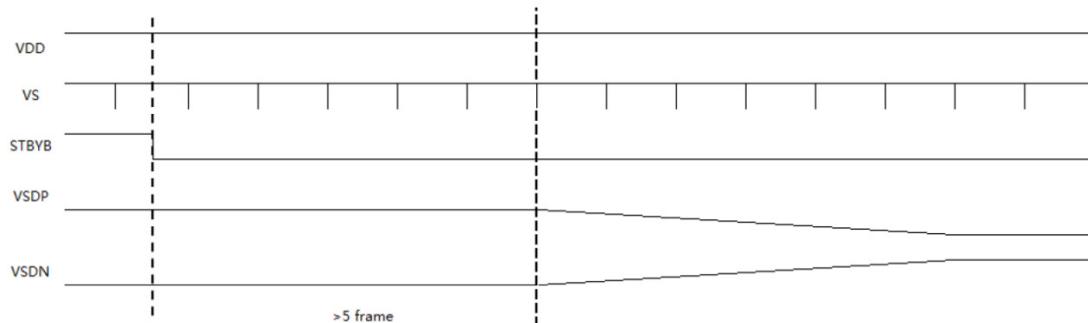

Power on Sequence

Notes:

1. When the power supply VDD is 0V, keep the level of input signals on the low or keep high impedance.
2. Do not keep the interface signal high impedance when power is on. Back Light must be turn on after power for logic and interface signal are valid.

4.1.1 Test Method

| Note | Item | Test Method |
|------|---|--|
| 1 | Setup | <p>The display should be stabilised at a given temperature for 30 minutes to avoid abrupt temperature change during measuring. In order to stabilise the luminance, measurements should be executed after lighting the backlight for 30 minutes in a windless room.</p>  |
| 2 | Response time | <p>Measure output signal waveform by the luminance meter when raster or window pattern is changed from white to black and from black to white.</p>  |
| 3 | Contrast ratio | <p>Measure maximum brightness and minimum brightness at the centre of the screen by displaying raster or window pattern. Then calculate the ratio between these two values.</p> $\text{Contrast Ratio (CR)} = \frac{\text{Brightness of unselected position (white)}}{\text{Brightness of selected position (black)}}$ |
| 4 | Viewing angle Horizontal θ Vertical ϕ | <p>Move the luminance meter from right to left and up and down and determinate the angles where contrast ratio is 10</p>  |
| 5 | Colour chromaticity | Measure chromaticity coordinates x and y of CIE1931 colorimetric system |
| 6 | Centre brightness | Measure the brightness at the centre of the screen |
| 7 | Brightness distribution | $(\text{Brightness distribution}) = 100 \times B/A \%$ <p>A: max. brightness of the 9 points B: min. brightness of the 9 points</p> |

5.1 LED Driving Conditions

| Item | Symbol | Condition | Min | Typ | Max | Unit |
|-----------------|--------|-----------|-----|------|-----|------|
| Forward Current | IF | Ta=25 °C | 60 | 75 | - | mA |
| Forward Voltage | VF | Ta= 25°C | | 25.6 | | V |
| LED life time | Hr | | | | 50k | hour |

Note:

- The lifetime of the LED is defined as a period till the brightness of the LED decreases to the half of its initial value.
- This figure is given as a reference purpose only, and not a guarantee.
- This figure is estimated for an LED operating alone.
The performance of an LED may differ when assembled as a monitor together with a TFT panel due to different environmental temperature.
- Estimated lifetime could vary on a different temperature and usually higher temperature could reduce the life significantly.

6.0 Quality Assurance Specification

6.1 Delivery Inspection Standards

6.1.1 Inspection Conditions

Inspection distance: 30 cm ± 2 cm
 Viewing angle: ±45°

6.1.2 Environmental Conditions

Ambient temperature: 25°C ±5°C
 Ambient humidity: 65±10% RH
 Ambient illumination: 300~700 lux

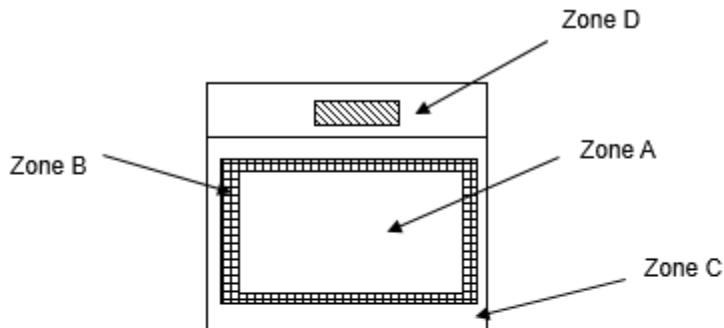

6.1.3 Sampling Conditions

1. Lot size: quantity of shipment lot per model
2. Sampling method:

| Sampling Plan | | GB/T 2828-2003 |
|---------------|--------------|-----------------------------|
| | | Normal inspection, Class II |
| AQL | Major Defect | 0.65% |
| | Minor Defect | 1.5% |

| No | Items to be inspected | Criteria | Classification of defects |
|----|-----------------------|---|---------------------------|
| 1 | Functional defects | 1) No display, Open or miss line 2) Display abnormally, Short 3) Backlight no lighting, abnormal lighting. 4) TP no function | Major |
| 2 | Missing | Missing component | |
| 3 | Outline dimension | Overall outline dimension beyond the drawing is not allowed | |
| 4 | Color tone | Color unevenness, refer to limited sample | Minor |
| 5 | Spot Line defect | Light dot , Dim spot,Polarizer Bubble ; Polarizer accidented spot. | |
| 6 | Soldering appearance | Good soldering , Peeling off is not allowed. | |

6.1.4 Definition of Area

Zone A : Effective Viewing Area(Character or Digit can be seen)

Zone B : Viewing Area except Zone A

Zone C Cover (Zone A+Zone B) which can not be seen after assembly by customer .)

Zone D : IC Bonding Area

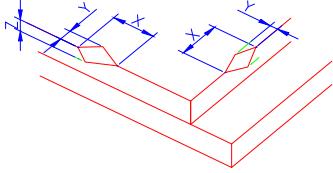

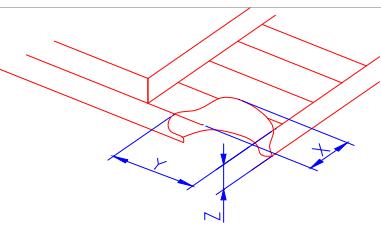

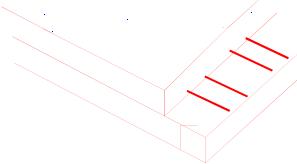

Note:

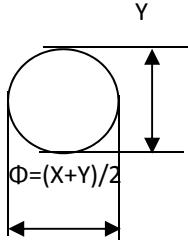

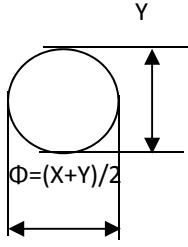

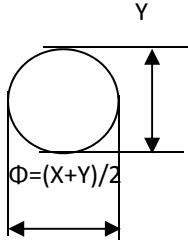

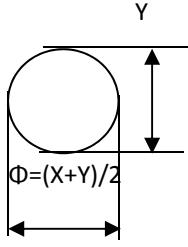

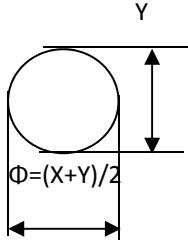

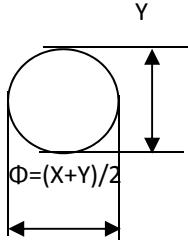

As a general rule ,visual defects in Zone C can be ignored when it doesn't effect product function or appearance after assembly by customer

6.1.5 Basic Principle

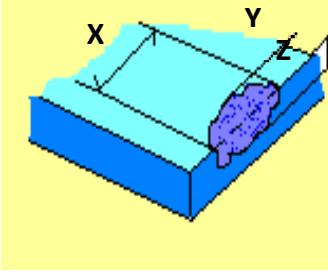

A set of sample to indicate the limit of acceptable quality level shall be discussed should a dispute occur.

Criteria (functional items)

| Number | Items | Criteria (mm) |
|--------|-----------------------|---------------|
| 1 | No display | Not allowed |
| 2 | Missing segment | Not allowed |
| 3 | Short | Not allowed |
| 4 | Backlight no lighting | Not allowed |
| 5 | TP no function | Not allowed |

6.1.7 Classification of Defects

Visual defects (except no or wrong label) are treated as minor defects, while electrical defects are treated as major defects.

Two minor defects are equal to one major defect in lot sampling inspection.

6.1.8 Identification / marking criteria

Any unit with illegible / wrong / double or no marking / label shall be rejected.

6.2 Dealing with Customer Complaints

6.2.1 Non-conforming analysis

Purchaser should supply Densitron with detailed data of non-conforming sample. After accepting it, Densitron should complete the analysis in two weeks from receiving the sample. If the analysis cannot be completed on time, Densitron must inform the purchaser.

6.2.2 Handling of non-conforming displays

If any non-conforming displays are found during customer acceptance inspection which Densitron is clearly responsible for, return them to Densitron. Both Densitron and customer should analyse the reason and discuss the handling of non-conforming displays when the reason is not clear. Equally, both sides should discuss and come to agreement for issues pertaining to modification of Densitron quality assurance standard.

7.0 Reliability Specification

7.1 Reliability Tests

| | Test Item | Test Condition | | Sample Size |
|-----------------|-----------------------------|---|-----|-------------|
| Durability Test | High Temperature Operation | Ta= 70°C | 96h | 3pcs |
| | Low Temperature Operation | Ta=-20°C | 96h | 3pcs |
| | Temperature Cycle Operation | -20°C ↔ 70°C ON/OFF, 20 cycles. ON time over 10 seconds, OFF time over 10 seconds | | 3pcs |
| | High Temperature Storage | Tp= 80°C | 96h | 3pcs |
| | Low Temperature Storage | Tp= -30°C | 96h | 3pcs |
| | ESD Test | 150pF, 330Ω, ±6KV (Contact)/±8KV (Air), 5 Points/panel, 10 times/point | | 3pcs |
| | Thermal Shock Resistance | The sample should be allowed to stand the following 5 cycles of operation: LTS for 30 minutes -> normal temperature for 5 minutes -> HTS for 30 minutes -> normal temperature for 5 minutes, as one cycle, then taking it out and drying it at normal temperature, and allowing it stand for 24 hours | | 3pcs |
| | Box Drop Test | 1 Corner 3 Edges 6 faces, 66 cm (Medium Box) | | 1 box |

Note: Ta=ambient temperature Tp= Panel temperature

Notes:

1. No dew condensation to be observed.
2. The function test shall be conducted after 4 hours storage at the normal temperature and humidity after removed from the test chamber.
3. No cosmetic or functional defects should be allowed.
4. Total current consumption should be less than twice the initial value.

8.0 Handling Precautions

Safety

If the LCD panel breaks, be careful not to get the liquid crystal fluid in your mouth or in your eyes. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and plenty of water.

Mounting and Design

Place a transparent plate (e.g. acrylic, polycarbonate or glass) on the display surface to protect the display from external pressure. Leave a small gap between the transparent plate and the display surface.

When assembling with a zebra connector, clean the surface of the pads with alcohol and keep the surrounding air very clean.

Design the system so that no input signal is given unless the power supply voltage is applied.

Caution during LCD cleaning

Lightly wipe the display surface with a soft cloth soaked with Isopropyl alcohol, Ethyl alcohol or Trichlorotrifluoroethane.

Do not wipe the display surface with dry or hard materials that will damage the polariser surface.

Do not use aromatic solvents (toluene and xylene), or ketonic solvents (ketone and acetone).

Caution against static charge

As the display uses C-MOS LSI drivers, connect any unused input terminal to VDD or VSS. Do not input any signals before power is turned on. Also, ground your body, work/assembly table and assembly equipment to protect against static electricity.

Packaging

Displays use LCD elements, and must be treated as such. Avoid strong shock and drop from a height.

To prevent displays from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity.

Caution during operation

It is indispensable to drive the display within the specified voltage limit since excessive voltage shortens its life. Direct current causes an electrochemical reaction with remarkable deterioration of the display quality. Give careful consideration to prevent direct current during ON/OFF timing and during operation. Response time is extremely delayed at temperatures lower than the operating temperature range while, at high temperatures, displays become dark. However, this phenomenon is reversible and does not mean a malfunction or a display that has been permanently damaged. If the display area is pushed on hard during operation, some graphics will be abnormally displayed but returns to a normal condition after turning off the display once. Even a small amount of condensation on the contact pads (terminals) can cause an electro-chemical reaction which causes missing rows and columns. Give careful attention to avoid condensation.

Storage

Store the display in a dark place where the temperature is $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$ and the humidity below 50%RH. Store the display in a clean environment, free from dust, organic solvents and corrosive gases. Do not crash, shake or jolt the display (including accessories).
