Quality Computer Power - For Today And Tomorrow

Looking for a quality,
stable and cost-effective
Intel(tm) compatible
power supply for your
ATX form-factor system
builds?

The new generation of LMS Power X-series power supplies could be your ideal choice, for both current PC, Media Centre, Workstation and Server system builds using the popular ATX form-factor.

Fully *Intel(tm)* v2.03 compliant with cross compatibility (when applicable) to *AMD(tm)* and *ATI(tm)* devices, means both current and future computer powering applications are assured.

Take for example our QuietFan technology, for low dB noise operation, quality components for an extended MTBF and of course a 100% burn-in test period to give you upmost confidence when it comes to switch on.

And helping to protect your investment, all LMS Power X-series Power Supplies come with over-voltage and EMI noise protection to further extended running times of even the most sensitive of components, such as DDR memory and CPUs.

specifications:

Compatible ATX Form-factor Motherboard Power Supply

700 Watt Auto-Switching Universal 110/240VAC Input*

QuietFan Technology For Lower Acoustics

Power Outputs: 24-Pin, 4-Pin (12v), 1x6-Pin PCIe, x4 SATA

x3 4-Pin, x1 FDD

Intel(tm) v2.03 Full Compliance For Peripheral Usage

Integral Over-Voltage Protection and EMI Suppression

Quality Components With Long MTBF with Rocker Switch

Stylish, Modern Design With 100% Burn-In test Period

*700 Watt Nominal
