ArTu PB Panelboard

Three-step selection process

Step 1

Select the fixed Panelboard required from page 5 or Select the Custom Panelboard required from page 7 or Select the Custom Pan Assembly required from page 9.

Step 2

Select the incoming device incoming kit and the inner door required from page 10.

Step 3

Select the outgoing device required from page 11.
(Including the front connection terminal sets for outgoing XT1 and XT3 MCCB's)

Remember

- a) 18 way 4 pole XT3 Fixed Panelboard/Custom Panelboard & Pan Assembly equals 16 outgoing ways
- b) When ordering the incoming breaker do not forget to order the connection kit
- c) For XT1 and XT3 outgoing devices front connection terminal sets are required
- d) For breaker terminal shrouds see MCCB's breaker accessories
- e) As standard no panelboard is fitted with a plinth (see panelboard accessories)
- f) For T2 outgoing breakers see most updated MCCB's technical catalogue
- g) For the custom panelboard fill the usable space with plug-in module bases. Any left over busbar / equivalent space on the inner door should be shrouded (see custom panelboard accessories)

ArTu PB Panelboard

Panelboard

General information

The new ArTu PB Panelboard series, offers incoming options up to 800A and outgoing ways up to 400A. The ArTu PB panelboard is extremely robust, due to the newly designed metalwork system.

The ArTu PB panelboard is available wall mounted as standard, and in three configurations of 6, 12, 16 and 18 outgoing ways, giving you the ability to build your own custom panelboard.

The new system allows you to fit T1, T3, XT1 and XT3, three or four pole and the single pole MCCB's to the same copper system using the new plug in bases designed by ABB.

Side cable chambers are available in a width of 390mm which can be fitted on either side of the main structure.

There is also an option of adding top, bottom and metering extension boxes.

As standard the panelboard is fitted with a plain door but, an optional, glazed version is available.

Technical characteristics

Compliance with Standards	IEC 61439-1, 2
Rated service voltage - Ue	up to 415 V
Rated insulation voltage - Ui	up to 1000 V
Rated frequency	50-60 Hz
Rated impulse withstand voltage - Uimp	8 kV
Rated current - In	1250A
Rated short-circuit short-time Withstand current - Icw	up to 65 kA
Rated short-circuit peak current - Ipk	up to 143 kA
IP degree of protection	43 with door

Selection

Step 1

Select the fixed capacity Panelboard required from the table below.

ArTu PB Panelboard

Custom panelboard

General information

The new ArTu PB panelboard system gives you the flexibility to design your own custom panelboard.

There are four sizes for the custom panelboard, 6, 12, 16 and 18 outgoing ways, and can be equipped with an incoming breaker from 250A to 1250A.

Each panelboard has a fixed dimension of copper depending on the quantity of outgoing ways required. All you have to do is select the plug-in bases and fill up the copper bar to suit the breakers you need. Any remaining copper can be shrouded and MCB blanking plates can be used to fill out the inner door.

ArTu PB Panelboard Custom Pan Assembly

General information

The Pan Assembly option allows you to design your own customized switchboard. As with the panelboard, it is available in three sizes with 6, 12, 16 and 18 outgoing ways, each of which can be equipped with an incoming breaker from 250A to 800A, three or four pole.

As standard the pan assembly is supplied in three or four pole version. Each pan assembly has a fixed dimension of copper depending on the quantity of outgoing ways you require. All you have to do is select the plug-in bases and fill up the copper bar to suit the breakers. Any remaining copper can be shrouded and MCB blanking plates can be used to fill the inner door cut out.

ArTu PB Panelboard and Pan Assembly

Panelboard interiors and accessories

(UL Category Code QEUY2/QEUY8)

General information

The ArTu PB UL series are suitable for applications up to 800A.

The ArTu PB UL is available in two configurations of 6 and 10 outgoing ways.

The interiors are intended to mount and provide electrical connections for circuit breakers. The main busbar system is mounted in the vertical position and the busbars finish is electrodeposited tin plate. The new system allows for T1 single pole MCCB's and T1, T2, T3, T4 and T5 three poles MCCB using the plug-in bases. The dimension of the plug-in breaker base is equivalent to a 3 poles MCCB's and the single pole base is the same width as the Tmax T1 single pole MCCB. It is possible to mount equal MCCB's on the left and on the right side of the main busbar system. Any empty ways can be fitted with a cover to insulate the live parts.

ArTu PB Panelboard

In-depth technical information

Compliance with IEC 61439-1 Standard

The ArTu PB Panelboards have undergone type tests in accordance with the IEC 61439-1 Standards. The results of these tests guarantee the performances of the ArTu switchboards and, by using the metalwork structures, ABB SACE air, modular and mouldedcase circuit-breakers, means that the end switchboard constructor does not have to carry out any further type tests when following the selection criteria and assembly instructions for the various components. These results, which are indicated below, can be referred to for the declaration of conformity of the switchboard.

Dielectric properties (Ref. par. 8.2.2 of the Standard)

	ArTu PB
Rated service voltage:	up to 690V AC
Rated insulation voltage:	up to 1000V AC
Rated impulse withstand voltage:	8kV

	21kA (1s)	30kA (1s)	39kA (1s)

Insulation distances (Ref. par. 8.2.5. of the Standard)

The insulation distances are guaranteed by following the ABB SACE metalwork structure and circuit-breaker assembly and mounting instructions.

Mechanical operation (Ref. par. 8.2.6 of the Standard)

Mechanical operation is verified by following the assembly and mounting instructions of the ABB SACE metalwork structures and circuit-breakers.

When correctly selected and assembled, as per the indications given in this catalogue and in the instruction manual, they allow construction of switchboards complying with the IEC 61439-1 Standard and on the basis, what is foreseen by the Low Voltage Directive of the European Community (Directive 73/23/EEC, Law 791/1977).

The above is only valid if the switchboard is designed and constructed when:

- selecting the materials according to the performances indicated in the ABB catalogues;
- sizing the conductors according to the prescriptions of the IEC 61439-1 and CEI 64-8 Standards;
- carrying out the individual tests foreseen under the IEC 61439-1 Standard successfully.

For greater safety during transport using a fork-lift truck, it is advisable to anchor the switchgear to the truck:

For switchgear with reduced depth, the following type of handling is recommended:

In the case of structures W=1000mm (with internal or external cable container) containing busbar systems, check the centre of gravity before handling.

To handle using a crane or overhead travelling crane, check the following conditions before lifting the switchgear:

- state of the ropes or chains;
- the angle between the lifting ropes and the switchgear roof must be $\geq 45^\circ$;
- the maximum number of columns transported is 3;
- ArTu PB maximum weight lifted as per DIN 580 (M8);

To respect the conditions described above, a lifting beam with appropriate characteristics can be used when there are several columns side by side.

Do not lift the Artu L structures by hooking the ropes to the connection box.
