

650 V, 10 A power Schottky silicon carbide diode

PowerFLAT™ 8x8 HV

Features

- Less than 1 mm height package
- High creepage package
- No or negligible reverse recovery
- Temperature independent switching behavior
- High forward surge capability
- Very low drop forward voltage
- Power efficient product
- ECOPACK2 compliant component

Applications

- Boost PFC
- Bootstrap diode
- LLC clamping function
- High frequency inverter applications

Description

This 10 A, 650 V, SiC diode is an ultra-high performance power Schottky diode. It is manufactured using a silicon carbide substrate. The wide band gap material allows the design of a Schottky diode structure with a 650 V rating. Due to the Schottky construction, no recovery is shown at turn-off and ringing patterns are negligible. The minimal capacitive turn-off behavior is independent of temperature.

Qualified in low profile package, the [STPSC10H065DLF](#) in PowerFLAT 8x8 HV, enables low drop forward voltage associated to high surge capabilities in low space environment such as telecom and network, industrial or renewable energy domains.

2. $t_p = 500\text{ }\mu\text{s}$, $\delta < 2\%$

To evaluate the conduction losses, use the following equation:

$$P = 1.00 \times I_{F(AV)} + 0.095 \times I_{F(RMS)}^2$$
