

VQ600

Datasheet

Pellistor Gas Sensor for Hazardous Areas (Fixed Systems)

The VQ600 Series is designed to detect and monitor various gases in the range 0 to 100% LEL for combustible gases and 0 to 100% volume in thermal conductivity mode when using the SGX range of pellistor gas sensors.

The VQ600 Series is designed for use as an integral part of a fixed gas detection system. The head comprises a stainless steel flameproof enclosure constructed with an integral stainless steel sinter which allows the safe entry of the atmosphere being tested.

There are three types of mounting thread available to allow easy fixing to the junction box of the fixed system and the facility to attach accessories to the sensor via an external M46 thread.

Features

Designed for fixed gas detectionsystems

For detection of the following:

- o **Combustible gases**
(Catalytic Sensors)
- o **Light gases** (e.g. hydrogen and helium)
(Thermal Conductivity Sensors)

LEL and % Volume Monitoring

Diffused gas sampling via sinter

Three thread options available

**Operational in varying temperature,
pressure and humidity**

Fast response

Rugged stainless steel construction

No moving parts

Resistance to corrosion

Low maintenance

Accessories available for field applications

ATEX certified

UKCA certified

CSA certified (Canada and US)

Principle of Operation

The pellistor used in the head should be operated in the manner recommended in the appropriate data sheet. In general it is recommended that the detector and compensator be run in a Wheatstone Bridge circuit so that a difference signal may be obtained. A suitable circuit is shown in Fig. 1.

In use, the bridge supply voltage should not be allowed to vary by more than the specified +0.1 V, or the output in clean air may change in sympathy.

The head must be mounted so that the cable is protected. This is normally achieved by mounting it into a port in a suitable junction box.

Although SGX generally recommends that pellistors should be run with a constant voltage supply to the bridge, it is possible to use a constant current supply provided that the voltage across the bridge in clean air remains within the recommended limits. It is essential that the head be efficiently earthed (grounded). This may be achieved by mounting it either into an earthed metal junction box, or into a non-metallic junction box fitted with an earth continuity plate used in accordance with the box manufacturer's instructions. There are no internal connections to the sensing head body.

General Data

Mechanical	
Dimensions	See outline on Page 4
Body material	Stainless Steel
Weight	435g
Environmental	
Ambient temperature range for operation (ATEX, UKCA):	-20°C to +60°C
for operation (CSA):	-20°C to +65°C
storage:	-20°C to +60°C
Operational pressure range	700hPa to 1300hPa
Humidity range for operation and storage	0 to 100% RH (Non-condensing)
Gases Detected	Combustible, Light Gases
Electrical	
DC supply to detectors	See Configurations Table on Page 2
Typical power	Refer to Pellistor Type Datasheet

Configurations

Base Sensor Type	Pellistor Type (See Note 1)	Operating Voltage (V) (See Note 3)	Typical Current (mA)	Type	Thread Code (See Table Below)			Gas Types
					1	2	3	
601	VQ1B	2	300	Catalytic	Yes	Yes	Yes	All Flammable Gases
603	VQ3B	2.5	330	Catalytic	Yes	Yes	Not Available (See Note 2)	All Flammable Gases
605M	VQ5MB	2	175	Thermal Conductivity	Yes	Not Available (See Note 2)	Not Available (See Note 2)	Light Gases (e.g. H ₂ , He ₂)
606M	VQ6MB	2	300	Thermal Conductivity	Yes	Not Available (See Note 2)	Yes	Light Gases (e.g. H ₂ , He ₂)
621T	VQ21TB	2	300	Catalytic	Yes	Yes	Yes	All Flammable Gases
621TS	VQ21TSB	2	300	Catalytic	Yes	Not Available (See Note 2)	Yes	All Flammable Gases
622T	VQ22TB	2	175	Catalytic	Yes	Yes	Yes	All Flammable Gases
623	VQ23TB	2.5	335	Catalytic	Yes	Not Available (See Note 2)	Not Available (See Note 2)	All Flammable Gases
625	VQ25B	2	300	Catalytic	Yes	Yes	Yes	Most Flammable Gases (Not including Methane)
631M	VQ31MB	3.5	90	Thermal Conductivity	Yes	Yes	Yes	Light Gases (e.g. H ₂ , He ₂)
635M	VQ35MB	4.2	55	Thermal Conductivity	Yes	Yes	Yes	Light Gases (e.g. H ₂ , He ₂)
641TS	VQ41TSB	2	100	Catalytic	Yes	Not Available (See Note 2)	Yes	Most Flammable Gases (Not including Methane)

Note 1: Refer to the datasheet for each Pellistor Type for more information.

Note 2: If the desired Thread Type is listed as "Not Available" please contact SGX.

Note 3: Thermal Conductivity sensors can be operated at voltages different to stated above depending upon target gas type.

Thread Codes

The sensing head is supplied with one of three different mounting threads at the user's choice (see outline on Page 4).

Thread code	Thread	Dimension X (mm)
1	Metric 20 x 1.5 mm	16.00
2	ANP (Taper) ½" - 14 NPT	19.85
3	ANP (Taper) ¾" - 14 NPT	20.16

Taper threads are manufactured in accordance with ANSI/ASME B1.20.1.

Operating Circuit

$$R_1 = R_3 = 500 \text{ to } 5000, R_2 = R_1/5$$

R_2 provides zero adjustment and may be omitted if not required.

Certification

	ATEX / UKEX	CSA
Certificate / File:	BAS01ATEX2110X CSAE22UKEX1013X	2589678
Standards	EN IEC60079-0:2018 IEC60079-1:2014Ed.7	CSAC 22.2 No.30 (M 1986) CSAC 22.2 No.142 (M 1987) FM 3600 (Nov 1998) FM 3615 (Feb 2006)
Product Marking	 II2G Ex db IIC T5 Gb  CSAE 22UK EX1013X	 Class I Groups B,C & D
Manufacturing & Certificate Address	SGX Europe sp. z o. o., 40-155 Katowice, 42 Kondutorska St., POLAND	

INSTRUCTIONS SPECIFIC TO HAZARDOUS AREA INSTALLATIONS

(Ref : EU ATEX Directive 2014/34/EU)

1. The head is classified as flameproof equipment and is marked:

BAS01ATEX2110X
II 2G Ex db IIC T5 Gb
Tamb = -20°C to +60°C
2W/5V MAX

UKCA CSAE 22UKEX1013X

The head should only be used within the limits imposed by this certification and by these conditions of use.

2. The head may be used in a hazardous area without further mechanical protection. However, the cable requires mechanical protection and must be terminated in a suitable enclosure.
3. The head must be efficiently earthed (grounded). This may be achieved by mounting it into an appropriate earthed metal junction box or into a non-metallic junction box fitted with an earth continuity plate used in accordance with the box manufacturer's instructions. There are no internal connections to the sensing head body.
4. In the event that the head becomes embedded in a junction box by over-tightening or corrosion, it may be released by the use of a spanner or wrench on the two flat surfaces on the sides of the body.
5. There are no user serviceable parts inside the body of the sensing head, and no attempt should be made to open the body for any purpose. The unit is non-repairable.
6. The head has not been assessed as a safety device (EHSR 1.5).
7. When installed in outdoor locations where rain or spray could interfere with the safe working of the head, or in indoor locations where water jets, sprays, or hoses are used routinely for cleaning purposes, the head should be fitted with the Weather Cap that is available as an accessory.
8. The end-user/installer should be aware that the certification of the head relies in its construction on the use of the following materials, which are suitable for most common applications:

Enclosure	Stainless Steel
Sinter	Stainless Steel
Bushing	Epoxy resin

In accordance with the Note in EN60079-0:2006 Clause 6.1, the end-user/installer shall inform the manufacturer of any adverse conditions that the head may encounter. This is to ensure that the head is not subject to conditions that may cause degradation of these materials.

Outline (All dimensions in millimetres; dimensions without limits are nominal)

Terminal connections

Lead Colour	Element
Blue	Detector
Red	Compensator
Yellow	Common

Accessories (All dimensions in millimetres)

Three accessories are available to complement the VQ600 Series gas detection head.

Flow Cap DAS546633AA

The Flow Cap allows the VQ600 to be used in applications where it is to be aspirated permanently with a pumped or pressurised sample. The cap is made of 316 stainless steel and can be used in a variety of applications involving pumped sampling analysis or detection systems.

Weather Cap DAS546632AA

The Weather Cap protects the VQ600 from water when used in external locations, where rain or spray could interfere with the safe working of the head, or in internal locations where water jets, sprays or hoses are used routinely for cleaning purposes, etc. The cap is made of 316 stainless steel and has been tested to IP64 for effectiveness, and also to ensure that it does not significantly affect the VQ600's performance.

Quick Calibration Hood DPP546618DA

The Quick Calibration Hood is constructed from polypropylene, and provides a convenient means of supplying test gases to the VQ600 in the field, for calibration and checking purposes. The assembly push-fits into the central gas access recess of the head, and is designed to accommodate 6 mm ID or 1/4" flexible tubing.

Ordering Information (VQ600)

Three accessories are available to complement the VQ600 Series gas detection head.

VQbase/n

Examples

VQ621T/1

VQ600 series head fitted with VQ21TB pellistor and supplied with 20 x 1.5 mm metric thread cap.

VQ603/2

VQ600 series head fitted with VQ3B pellistor and supplied with 1/2" - 14 NPT American National Pipe Taper thread.

DISCLAIMER:

SGX Europe Sp. z o.o. reserves the right to change design features and specifications without prior notification. We do not accept any legal responsibility for customer applications of our sensors. SGX Europe Sp. z o.o. accepts no liability for any consequential losses, injury or damage resulting from the use of this document, the information contained within or from any omissions or errors herein. This document does not constitute an offer for sale and the data contained is for guidance only and may not be taken as warranty. Any use of the given data must be assessed and determined by the user thereof to be in accordance with federal, state and local laws and regulations. All specifications outlined are subject to change without notice.

SGX Europe Sp. z o.o. sensors are designed to operate in a wide range of harsh environments and conditions. However, it is important that exposure to high concentrations of solvent vapours is to be avoided, both during storage, fitting into instruments and operation. When using sensors on printed circuit boards (PCBs), degreasing agents should be used prior to the sensor being fitted. SGX Europe Sp. z o.o. makes every effort to ensure the reliability of its products. Where life safety is a performance requirement of the product, we recommend that all sensors and instruments using these sensors are checked for response to gas before use.
