Relay Sockets SU series

One step wiring
Easy & quick connection

IDEC CORPORATION

+ Push-in

Time saving & efficient

Save up to **55%** in wiring time

Wiring time reduced greatly compared with conventional screw terminals.

(Compared with IDEC products)

Reduce maintenance work

Push-in terminals eliminate the need for torque maintenance such as tightening of screws because screws are not used.

Wide range of options

Easy wiring to coil side connection using jumpers

Can be used with polarized relays.

*) The rated current is 2A.

IDEC GT5Y timers can be mounted

GT5Y timer : RU relay

Marking plate allows for easy identification

A marking plate enables easy identification of connections. Maintenance time is reduced.

One step wiring, easy & quick connection

Safe and efficient SU series Push-in relay sockets

Highly reliable

High visibility

The terminal number on the socket can be clearly seen on the socket preventing incorrect wiring. Also, the distinct color pusher prevents a flat blade screwdriver from being inserted into the wire port.

Vibration-resistant

Safe and reliable Push-in connection achieves high contact reliability and vibration resistance regardless of the wire size or shape.

Before inserting wire

Wire inserted

IP20 Finger-safe

IEC60529 finger-safe design. IP20 protection. Safe contact protection structure prevents electric shock.

Release lever

The release lever can be mounted to hold and remove the relay easily.

SU Series Relay Sockets

Push-in relay sockets reduce wiring by 55%*

* Compared with conventional screw terminal relay sockets.

Parts Description

Note: Two wire ports for each terminal

Inserting the Wire

Wire with ferrule or solid wire

- 1) Insert the wire to the back of the wire port.
- 2) Wiring is complete. Pull the wire lightly to make sure that the wire does not pull out from the socket.

Stranded wire

- 1) Push the pusher (orange button) using a flat blade screwdriver.
- 2) Insert the wire fully in the wiring port while pressing the pusher
- 3) Release the flat blade screwdriver. Wiring is complete. Pull the wire lightly to make sure that the wire does not pull out from the socket.

Removing the Wire

- 1) Push the pusher using a flat blade screwdriver.
- 2) Pull out the wire while pressing the pusher.
- 3) Release the flat blade screwdriver.

Instructions

Note

- After wiring, tug lightly to make sure that the wire is properly connected.
- Operate the pusher with a force of 40N. Do not press excessively.
- Do not pull the wire out without depressing the pusher. When pulling the wire, be sure to pull in a straight direction. Otherwise, the socket may be damaged.
- Use a recommended flat blade screwdriver with the blade size of 0.4×2.5mm.
- When mounting multiple sockets on a DIN rail, be sure to secure both side with end clips (BNL6).

Crimping of Ferrules and Wiring

- Choose an appropriate ferrule for the wire.
- Cut the wire carefully to get a flat end.
- Make sure that ferrule sleeve is completely filled by the conductor. Depending on the cross section, the conductor should not protrude approx. 0 to 1 mm from the ferrule sleeve.

- When crimping, refer to the instructions of the crimping tool.

Crimping dimensions: W2.4×H1.9 mm

Maximum connectable crimping size is W2.4×H1.9. Make sure that the ferrule size will be smaller than this dimension.

Note 1) If a tool other than the recommended crimping is used, the ferrule may not be crimped to the appropriate size and the clamp or spring inside the socket may be deformed and may not operate normally.

Note 2) Pin crimp terminals cannot be used.

Installing the Hold-down Spring

Use SU9Z-S21R (for relay) or SU9Z-S21T (for timer) hold-down springs.

Install the hold-down springs into appropriate spring insert hole.

To install, see below diagram.

Note) Confirm that the Hold-down Spring is securely installed into the spring insert hole. The relay may fall off if it is not installed properly.

Installing / Removing the Relay

Installing the Relay

1. Unlock the release lever by pulling down as shown with arrow ①.
2. Press the relay against the socket as shown with arrow ②. Make sure that the relay is firmly in place.

①

②

Note: Confirm that the relay is securely installed in the socket. The relay may fall off if it is not installed properly.

Removing the Relay

Lightly press the relay to prevent it from falling off. Then pull down the release lever to the direction shown by the arrow and the remove the socket.

Note)

Make sure that wire or finger is not caught between the release lever and socket.

Because release lever is removable, make sure not to apply excessive force. Otherwise the relay may fall and result in damage.

Installing the Marking Plate

Install the marking plate as shown in the diagram below.

Mark on the surface using an oil-based marker, or affix a sticker with markings.

The size of the marking surface is 8.4mm × 25mm.

Using the Jumper

Insert the jumper to the back of the jumper slot. To remove, insert the small flat blade driver into the slot below and pull out. Because the rated current is 2A, use at 2A maximum.

Installing the Release Lever

To install the release lever, SU9Z-S21R (for relay), attach to the protrusion on the socket as shown below.

- ①: Mounting hole for SU9Z-S21R
- ②: Mounting hole for SU9Z-S21T
- ③: SU9Z-C21R protrusion for installation
