

PAN9028

Wi-Fi Dual Band 2.4 GHz/5 GHz and Bluetooth® Module

Product Specification

Rev. 0.2

Overview

The PAN9028 is a 2.4 GHz and 5 GHz ISM band Wi-Fi and Bluetooth radio module, which includes a wireless radio and a power management IC for easy integration of Wi-Fi and Bluetooth connectivity into various electronic devices.

Features

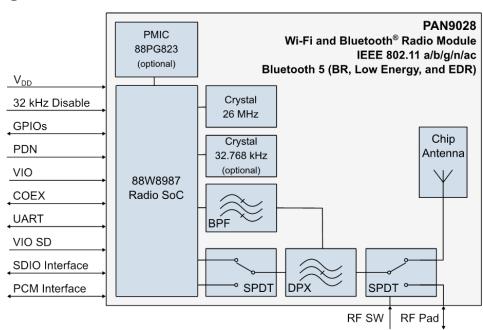

- Dual band 2.4 GHz and 5 GHz 802.11 a/b/g/n/ac Wi-Fi/Bluetooth combo module
- Supports 802.11i security standards through AES, CCMP, and more security mechanism
- 802.11e Quality of Service is supported for multimedia application
- IEEE 802.11ac (Wave 2), 1x1 spatial stream with data rates up to 433 Mbps (MCS9, 80 MHz channel bandwidth)
- IEEE 802.11ac MU-MIMO beamformee
- Bluetooth 5 (includes Low Energy)
- Dual simultaneous and independent WLAN and Bluetooth operation
- Dynamic Rapid Channel Switching (DRCS) for simultaneous operation in 2.4 GHz and 5 GHz bands
- Indoor location and navigation with IEEE 802.11mc

- · Power management with sleep clock
- Coexistence interface for arbitration of co-located WLAN, Bluetooth, or mobile wireless system (e.g. LTE or ZigBee[®])
- Generic interfaces include SDIO 3.0 and high-speed UART for host processor connection
- Software driver Linux[®]

Characteristics

- Surface Mount Type (SMT) 24 mm x 12 mm x 2.8 mm
- NXP[®] 88W8987 WLAN 2.4 GHz and 5 GHz and Bluetooth single-chip solution inside
- Single power supply: 3.3 V with Marvell[®] 88PG823 Power Management IC (optional)
- Tx power: 16 dBm at 802.11b
- Rx sensitivity: –97 dBm at 802.11b DSSS 1 Mbps
- IEEE 802.11ac 20 MHz, 40 MHz, 80 MHz channel bandwidth
- Long and Short Guard Interval support
- Current consumption Wi-Fi typical 320 mA (at Tx) and 60 mA (at Rx)
- SDIO 1 bit or 4 bit
- Wide temperature range of -30 °C to 85 °C

This specification sheet is copyrighted. Reproduction of this document is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Do not disclose it to a third party.

All rights reserved.

This Product Specification does not lodge the claim to be complete and free of mistakes.

Document Acceptance

By signing the Product Specification, you acknowledge that you are a legal representative for your company and that you understand and accept the validity of the contents herein.

If the signed version of the Product Specification has not been returned to Panasonic within 30 days after receipt of the product, the specification or approval sheet shall be deemed to be accepted by you.

Engineering Samples (ES)

If Engineering Samples are delivered to the customer, these samples have the status "Engineering Samples". This means that the design of this product is not yet concluded. Engineering Samples may be partially or fully functional, and they may differ from the published Product Specification.

Engineering Samples are not qualified and they are not to be used for reliability testing or series production.

Disclaimer

The customer acknowledges that samples may deviate from the Product Specification and may bear defects due to their status of development and the lack of qualification mentioned above.

Panasonic rejects any liability or product warranty for Engineering Samples. In particular, Panasonic disclaims liability for damages caused by:

- The use of the Engineering Sample other than for evaluation purposes, particularly the installation or integration in another product to be sold by the customer,
- Deviation or lapse in function of the Engineering Sample,
- Improper use of the Engineering Sample.
- Panasonic Industrial Devices Europe GmbH disclaims any liability for consequential and incidental damages. In case of any queries regarding the Engineering Samples, please contact your local sales partner or the related product manager.

Panasonic Industrial Devices Europe GmbH disclaims any liability for consequential and incidental damages. In case of any queries regarding the Engineering Samples, please contact your local sales partner or the related product manager.

1 About This Document

1.1 Purpose and Audience

This Product Specification provides details on the functional, operational, and electrical characteristics of the Panasonic PAN9028 module. It is intended for hardware design, application, and Original Equipment Manufacturers (OEM) engineers. The product is referred to as "the PAN9028" or "the module" within this document. Unless otherwise stated the data in this document is valid for all module variants.

1.2 Revision History

Revision	Date	Modifications/Remarks		
0.1	2017-09-15	First preliminary version		
0.2	2020-08-28	New design. Added CPU frequencies, chapter "Restricted End Use", additional module and kit variants and versions, second module variant without PMIC and 32 kHz, module specific parameters, MR variant. Changed storage temperature.		
		Updated disclaimer, product overview, chapter "Overview", block diagram. Formal changes.		

1.3 Use of Symbols

Symbol	Description		
	Note		
\Box	Indicates important information for the proper use of the product. Non-observance can lead to errors.		
A	Attention		
<u></u>	Indicates important notes that, if not observed, can put the product's functionality at risk.

PAN9028 Bluetooth Module 2 Overview

2 Overview

The PAN9028 is a dual band 2.4 GHz and 5 GHz 802.11 a/b/g/n/ac Wi-Fi radio module with integrated Bluetooth BR/EDR/Low Energy (LE), specifically designed for highly integrated and cost-effective applications. The simultaneous and independent operation of the two standards enables very high data rates (802.11ac) and low-power operation (Bluetooth LE). Integrated power management, a fast dual-core CPU, 802.11i security standard support, and high-speed data interfaces deliver the performance for the speed, reliability, and quality requirements of next generation products. Tx power calibration data, Wi-Fi, and Bluetooth system parameters are pre-stored on the one-time-programmable memory of the PAN9028 during production at Panasonic. This simplifies passing the certification process for PAN9028 customers. Furthermore, the module reduces design, test, and calibration effort resulting in reduced time-to-market compared to discrete solutions.

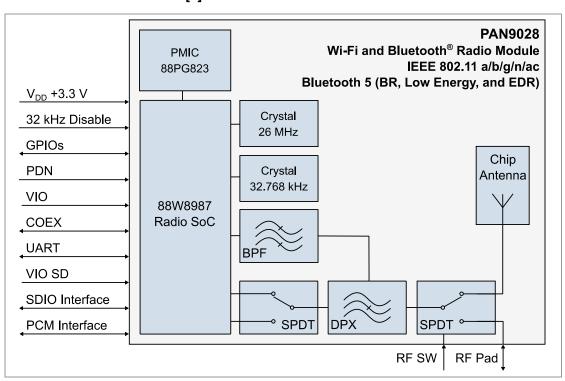

Integrating Wi-Fi and Bluetooth wireless connectivity allows high throughput applications for industrial devices and appliances. The combination of Wi-Fi and Bluetooth provides the highest flexibility for connectivity.

For related documents please refer to ⇒ 7.2.2 Product Information.

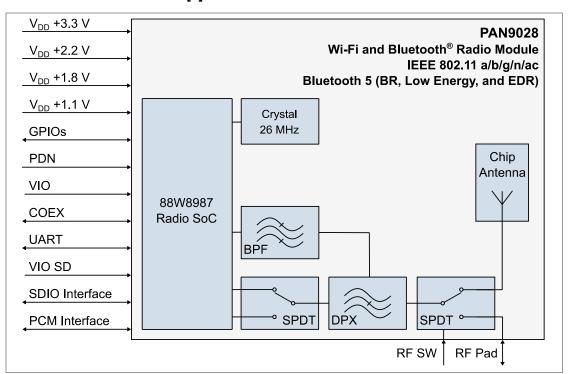

For further information on the variants and versions please refer to ⇒ 7.1 Ordering Information.

RF-Switch Pin Functions for all Module Variants

No.	Pin Name	Pin Type	Logical Level for Activation			Logical Level for Activation	
			On-Board Chip Antenna	RF OUT Pin			
B11	RF_SW1	Input signal	GND (0 V)	3.0 V to 3.6 V (typ. 3.3 V)			
A11	RF_SW2	Input signal	3.0 V to 3.6 V (typ. 3.3 V)	GND (0 V)			

Control Pin Function for all Module Variants

The control pin is used as configuration input to set parameters following a reset. The definition of the pin changes immediately after a reset to its usual function. To set a configuration bit to "02, attach a $50 \, \text{k}\Omega$ to $100 \, \text{k}\Omega$ resistor from the pin to ground. No external circuitry is required to set a configuration bit to "1".

The configuration of the control pin is used for the firmware boot option. The software reads and boots accordingly.

PAN9028 Bluetooth Module 2 Overview

2.3 Host Interface

The bus interface connects several host interface bus units to the CPU bus of the device through the internal bus. The connection of each unit is multiplexed with other bus units. The high-speed UART interface is connected to the CPU bus through a separate bus.

Туре	Features
High-speed UART interface	The device supports a high-speed Universal Asynchronous Receiver/Transmitter (UART) interface, compliant with the industry standard 16550 specification.
	 FIFO mode permanently selected for transmit and receive operations Two pins for transmit and receive operations Two flow control pins Interrupt triggers for low-power, high throughput operation
SDIO interface	The device supports an SDIO device interface that conforms to the industry standard SDIO full-speed card specification and allows a host controller using the SDIO bus protocol to access the device.
	 Supports SDIO 3.0 Standard 1-bit SDIO or 4-bit SDIO transfer modes with full clock range up to 208 MHz On-chip memory used for CIS Special interrupt register for information exchange Allows card to interrupt host

2.4 Peripheral Bus Interfaces

The Peripheral Bus Unit (PBU) connects several low speed peripherals to the internal bus of the device. The device consists of the GPIO Interface and the One Time Programmable Memory (OTP).

Туре	Features
General Purpose I/O (GPIO) Interface	 User-defined GPIOs (each configured to either input or output) Each GPIO controlled independently Each I/O configurable to output bit from GPIO_OUT
One Time Programmable Memory (OTP)	 Storing device-specific calibration data and hardware information like MAC/BD address, WLAN, and Bluetooth parameters Programmed during production process of device Device performs calibration when it is powered up

For further information please refer to ⇒ 4.10.2 Peripheral Interface.

2.5 PCM Interfaces

The device supports the PCM interface.

Туре	Features	
PCM Interface	 Master or slave mode PCM bit width size of 8 bits or 16 bits Up to four slots with configurable bit width and start positions Short frame and long frame synchronization 	

For further information please refer to ⇒ 4.10.3 Audio Interface.

2.6 Coexistence

The implemented coexistence framework is based on the IEEE 802.15.2 recommended practice Packet Traffic Arbitration (PTA) scheme and the Bluetooth Special Interest Group (Bluetooth) Core Specification Volume 7 (Wireless Coexistence Volume).

2.6.1 WLAN and Bluetooth Channel Information Exchange

Since Bluetooth and IEEE 802.11b/g/n WLAN use the same 2.4 GHz frequency band, each can cause interference with the other. The level of interference depends on the respective frequency channel used by Bluetooth and WLAN (other factors can impact interference, like Tx power and Rx sensitivity of the device).

In a system with both Bluetooth and WLAN, the common host receives information about WLAN channel usage and passes the information to the Bluetooth device. For Bluetooth 1.2 devices with Adaptive Frequency Hopping (AFH) enabled, the Bluetooth device can block channel usage that overlaps the WLAN channel in use.

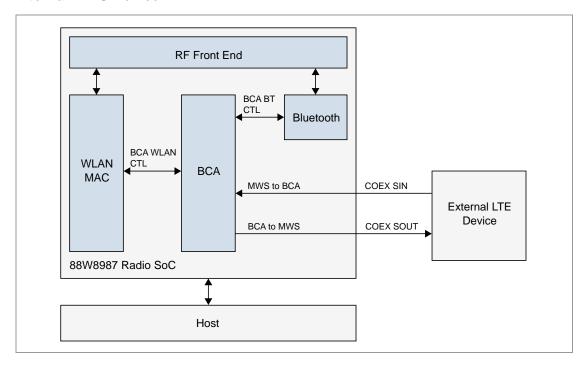

When the Bluetooth device avoids all channels used by the WLAN, the impact of interference is reduced, but not completely eliminated. For Bluetooth 1.1 devices, the Bluetooth device cannot block WLAN channel usage. In this case, a Bluetooth Coexistence Arbiter (BCA) scheme at MAC level is required. The BCA scheme can also be used with Bluetooth 1.2 devices to further reduce the impact of interference to a minimum.

2.6.2 External Mobile Wireless System (LTE or ZigBee) and BCA Exchange

Based on the Bluetooth SIG Wireless Coexistence Volume, the device supports a Wireless Coexistence Interface 2 (WCI-2) protocol for WLAN/Bluetooth coexistence with an external Mobile Wireless System (MWS), such as a Long Term Evolution (LTE) or ZigBee device. WCI-2 is a 2-wire transport interface. An internal coexistence is used to exchange request/grant with the BCA.

2.6.3 System Configuration

External MWS Device

2.6.4 WCI-2 Interface

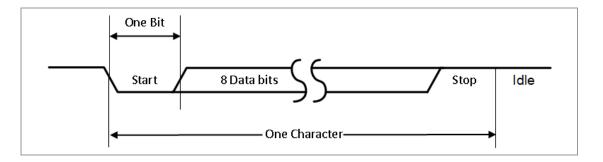

The coexistence interface includes a Mobile Wireless System (MWS) transport controller to accommodate a 2-wire, UART-based serial transport interface. This interface is a standard full-duplex UART (TxD and RxD) carrying logical signals framed as UART characters. In addition, it allows support of multiple logical channels.

Interface Signals

Pin No.	Signal Name	Specification Name	Pin Type	Description
F5	COEX_SIN	RxD	Input	Serial data from external MWS device
B10	COEX_SOUT	TxD	Output	Serial data to external MWS device

Signal Waveform Format

The messaging is based on a standard UART format. The UART signals should be connected like a null-modem. For example, the local TxD connected to the remote RxD and vice versa.

Interface Transport Settings

Item	Range	Comment
Baudrate	921 600 ~ 4 000 000	Baud
Data Bits	8	LSB first
Parity Bits	0	No parity
Stop Bit	1	One stop bit
Flow Control	No	No flow control

Support Baud Rates

Baud			
921 600	2 000 000	3 000 000	4 000 000

Real-Time Signaling Message

The real-time signaling message is used to transport real-time signals over the 2-wire transport interface.

The real-time signaling message conveys the real-time signals (Bluetooth Core Specification, Volume 7, Part A) in one message. The time reference point for the real-time signaling message is the end of message bit 5 (transition to stop bit).

Defined real-time signaling messages include:

- Coexistence Controller to MWS device
- MWS device to Coexistence Controller

Real-Time Signaling	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
MWS to Coexistence Controller (Signal)	FRAME_SYNC	MWS_RX	MWS_TX	PATTERN [0]	PATTERN [1]
Coexistence Controller to MWS (Message)	BLUETOOTH _RX_PRI	BLUETOOTH _TX_ON	802_RX_PRI	802_TX_ON	RFU

PAN9028 Bluetooth Module 2 Overview

Signal Name
FRAME_SYNC
MWS_RX
MWS_TX
PATTERN [1, 0]
BT_RX_PRI
BT_TX_ON
802_RX_PRI
802_TX_ON
MWS_INACTIVITY_DURATION
MWS_SCAN_FREQUENCY_OFFSET

Transport Control Message

The transport control messages can modify the state and request state information of the MWS coexistence interface.

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
Transport Control Message	RESEND_REAL	RFU	RFU	RFU	RFU
	_TIME				

Signal Name	Description
RESEND_REAL_TIME	This bit is set if a device wants to get a status update of the real-time signals. The signal is usually used after wake-up from sleep of the transport interface to get an update of the real-time signals.
	If the receiving device's transport interface is awake it shall send a real-time message with the current status of the real-time signals within 4 UART character period. If the signal is not transmitted within 4 UART character periods, the device is considered asleep.
	If the receiving device's transport interface is not awake it shall not send a real-time message.
	Bluetooth initiated: If the MWS is currently scanning or has an ongoing inactivity duration, the MWS shall send a frequency scan message or an inactivity duration message after transmitting the real-time message. If the receiving device's transport interface is not awake it shall not send a frequency scan or inactivity duration message.

Transparent Data Message

The transparent control messages can modify the state and request state information of the MWS coexistence interface.

PAN9028 Bluetooth Module 2 Overview

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
Transparent Data Message	NIBBLE_POSIT	DATA [0]/[4]	DATA [1]/[5]	DATA [2]/[6]	DATA [3]/[7]

Signal Name	Description
NIBBLE_POSITION	0 = least significant nibble
	1 = most significant nibble
DATA[n]; n=0 7	Data bits of the message octet

MWS Inactivity Duration Message

The inactivity duration messages is used to send the MWS_INACTIVITY_DURATION signal from the MWS device to the Coexistence Controller.

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
MWS Inactivity Duration	DURATION [0]	DURATION [1]	DURATION [2]	DURATION [3]	DURATION [4]
Message					

The idle duration is encoded in 5 bits given by the formula:

Inactivity_Duartion = DURATION \cdot 5 ms

Inactivity durarations smaller than 5 ms are not communicated.

If all bits are set to "1" the inactivity duration is infinite. If all bits are set to "0" or MWS_RX or MWS_TX are set to "1", the inactivity period ends.

MWS Scan Frequency Offset Message

The MWS scan frequency offset message is used to send the MWS_SCAN_FREQUENCY_ OFFSET signal from the MWS device to the Coexistence Controller.

Message	MSG [0]	MSG [1]	MSG [2]	MSG [3]	MSG [4]
MWS Scan Frequency Offset	BAND	FREQ [0]	FREQ [1]	FREQ [2]	FREQ [3]

The RF scan frequency is encoded in 5 bits given by the formula:

$$RF_FREQ_OFFSET = FREQ \cdot 10 MHz$$

If BAND is set to "0" the RF_FREQ_OFFSET is the negative value from the lower edge of the ISM band and if BAND is set to "1", RF_FREQ_OFFSET is the positive value from the top edge of the ISM band.

FREQ set to all "0" indicates the end of the scan period.

2.6.5 Bluetooth Coexistence Arbiter

Type Features

Туре	Features
Capability	 Programmable coexistence interface timing, interface modes, and signal polarity to support a variety of external Bluetooth devices Programmable decision policies and transaction lock behavior for various use cases
	Interface with external or on-chip Bluetooth device
	Support Bluetooth 1.1 or Bluetooth 1.2 AFH
	WLAN-/Bluetooth-coordinated low-power design
	Enhanced information sharing between WLAN and Bluetooth for combo systems
	WLAN/Bluetooth/MWS (LTE or ZigBee) coexistence support
Arbitration	 Contention resolved by a customizable decision matrix that allows independent grant decision for each device
	Vectors for the decision matrix:
	WLAN priority (2-bit)WLAN direction
	Bluetooth priority (1-bit or 2-bit)
	Bluetooth direction Bluetooth frequency in (sut bond)
	Bluetooth frequency in/out bandMWS priority (2-bit)
	- MWS direction
AFH	If AFH is enabled in the Bluetooth device, and there is a sufficient guard-band outside the WLAN operating frequency, the Bluetooth device uses the Out-Of-Band (OOB) channel with respect to the WLAN device. Otherwise, the Bluetooth device uses the In-Band (IB) and OOB channels with respect to the WLAN device.
	The IB and OOB information is either provided by the Bluetooth device through the coexistence interface, or it can be provided through firmware controls in a shared-host system. IB/OOB is a vector in the decision matrix.
Decision Policies	System configuration is a major consideration when planning decision policies. The configuration governs how RF paths are shared and how much interference will occur.
	Interference combinations include:
	 WLAN Tx and Bluetooth Tx
	WLAN Tx and Bluetooth RxWLAN Rx and Bluetooth Tx
	- WLAN Rx and Bluetooth Tx - WLAN Rx and Bluetooth Rx
	Interference combinations where WLAN and Bluetooth share the same antenna:
	WLAN Tx and Bluetooth Tx share same antenna, the decision matrix allows
	either WLAN or Bluetooth Tx (both OOB and IB), based on relative packet priorities.
	 WLAN Tx and Bluetooth Rx (both OOB and IB) have sizable interference impacts on Bluetooth Rx, the decision matrix grants or denies WLAN Tx based on relative packet priorities.
	 WLAN Rx and Bluetooth Tx (both OOB and IB) have sizable interference impacts on WLAN Rx, the decision matrix grants or denies Bluetooth Tx based on relative packet priorities.
	 WLAN Rx and Bluetooth Rx (both OOB and IB) have no impact on each other, the decision matrix grants both.

PAN9028 Bluetooth Module 2 Overview

Туре	Features
	 Interference combinations where WLAN and Bluetooth have their own antenna: WLAN Tx and Bluetooth Tx in OOB situation have little interference impact on each other, the decision matrix grants both. WLAN Tx and Bluetooth Tx in IB have sizable interference impact on each other, the decision matrix allows either WLAN or Bluetooth Tx, based on relative packet priorities. WLAN Tx and Bluetooth Rx in OOB situation have little interference impact on each other, the decision matrix grants both provided there is enough antenna isolation between WLAN and Bluetooth antenna. WLAN Tx and Bluetooth Rx in IB situation have sizable interference impact on Bluetooth Rx, the decision matrix grants or denies WLAN Tx based on relative packet priorities. WLAN Rx and Bluetooth Tx in OOB situation have little interference impact on each other, the decision matrix grants both provided there is enough antenna isolation between WLAN and Bluetooth antenna. WLAN Rx and Bluetooth Tx in IB situation have sizable interference impact on WLAN RX, the decision matrix grants or denies Bluetooth Tx based on relative packet priorities. WLAN Rx and Bluetooth Rx (both OOB and IB) have no impact on each other, the decision matrix grants both.
Decision Policies (continued)	For the devices running in a basic shared antenna configuration, the linear switching imposes restrictions on simultaneous transfer. Reasonable policies include: - WLAN and Bluetooth are never granted at the same time - Decision matrix grants a device based on relative packet priorities and direction - Priority order: High > Medium High > Medium > Low - For equal priority contention, select one device to win, that optimizes the usage case For the devices running in an enhanced shared antenna configuration, the linear switching imposes restrictions on some simultaneous transfers.
Transaction Stopping	The arbiter allows control of what transfers can be stopped after an initial grant. If allowed, a transaction can be stopped for higher priority request. A transaction stop decision is a function of the decision policies and transaction stopping control. The transaction stopping control is configurable per device and direction.

2.6.6 Bluetooth Capability

PAN9028 Bluetooth Module 2 Overview

Туре	Features
Request Schemes	The PTA signals are directly controlled by the hardware to meet timing requirements of the Bluetooth radio. The software controls the type of traffic in priority mode.
	Mechanisms enforced for control include:
	Selection of certain types of communication always treated as high priority
	Selection of individual frames marked with high priority
	Real-time signaling of the next slot marked with high priority
	Automatic hardware control based on the grant/denial history of the Bluetooth link
Timing Control	The PTA signal timing scheme is fully programmable relative to the Bluetooth packet timing.

2.6.7 WLAN Capability

Туре	Features
Capability	The WLAN device technology uses an internal coexistence interface to exchange request/grant with the BCA.
	Features:
	 Packet-based request signaling with direction and priority information 1-bit or 2-bit priority signaling to support 4 priority levels
	Multiple WLAN Rx request trigger sources, including early prediction
	WLAN Tx request cancellation and abort if grant denied or revoked in middle of request
	802.11n A-MPDU treated as single packet
Packet	Programmable mask allows each frame type to be mapped to a priority
Classification	 Default setting puts response frames (ACK), beacons, and QoS frames as high priority
	WLAN Tx and Rx have separate priority masks
Queue	Programmable mask allows each transmit queue to be mapped to a priority
Classification	Queue-based mapping is optional for software-generated frames only

PAN9028 Bluetooth Module 2 Overview

2.6.8 LTE (MWS) Capability

The device supports a Bluetooth SIG WCI-2 MWS coexistence signaling interface. The coexistence logical signaling is designed to enable a standard interface to allow an MWS device and a Coexistence Controller to exchange information and support cooperative coexistence.

The WCI-2 signals carry time-critical information such as the start point of an MWS frame. The logical coexistence signaling architecture also includes transparent data messaging and vendor specific data messaging mechanism to enable passing information to and from the collocated MWS device and Coexistence Controller when long latency (tens of milliseconds) cannot be tolerated.

For further information please refer to ⇒ 2.6.4 WCI-2 Interface.

Coexistence Signals

The logical signals assist in time alignment, protecting MWS from interference and maximizing the usability of the Bluetooth radio.

Time-Critical Coexistence Signals

Signal Name	Direction
FRAME_SYNC	MWS to Bluetooth
BT_RX_PRI	Bluetooth to MWS
BT_TX_ON	Bluetooth to MWS
802_RX_PRI	Bluetooth to MWS
802_TX_ON	Bluetooth to MWS
MWS_PATTERN	MWS to Bluetooth
MWS_RX	MWS to Bluetooth
MWS_TX	MWS to Bluetooth
MWS_INACTIVITY_DURATION	MWS to Bluetooth
MWS_SCAN_FREQUENCY_OFFSET	MWS to Bluetooth
MWS_TX_PRIL (MWS TX Priority Level)	MWS to Bluetooth
MWS_RX_PRIL (MWS RX Priority Level)	MWS to Bluetooth

2.6.9 ZigBee (MWS) Coexistence Capability

ZigBee is based on the IEEE 802.15.4 standard and it is used by a suite of communication protocols to create Personal Area Networks (PANs) supporting home automation, lighting control, etc. ZigBee radios operate in the 2.4 GHz ISM band worldwide. Unlike Bluetooth, the ZigBee specification does not use AFH. When coexisting with WLAN/Bluetooth in the 2.4 GHz band, it is important to avoid co-channel (IB) operation of these radios.

PAN9028 Bluetooth Module 2 Overview

The device re-uses the MWS coexistence interface to support ZigBee coexistence. The coexistence logical signaling is used to allow a ZigBee device and a WLAN/Bluetooth combo device to exchange information and support cooperative coexistence.

Coexistence Signals

The logical signals used for ZigBee and WLAN/Bluetooth coexistence are a subset of the LTE coexistence signaling. Considering the lower data rate of ZigBee packets, a lower baud rate may be chosen for the 2-wire UART physical interface. The BCA supports 3-way arbitration among ZigBee/WLAN/Bluetooth requests.

Coexistence Signals

Signal Name	Direction
MWS_RX	MWS to Bluetooth
MWS_TX	MWS to Bluetooth
MWS_PATTERN	MWS to Bluetooth
MWS_RX_PRI	MWS to Bluetooth
MWS_TX_PRI	MWS to Bluetooth
802_RX_PRI	Bluetooth to MWS
802_TX_ON	Bluetooth to MWS
BT_RX_PRI	Bluetooth to MWS
BT_TX_ON	Bluetooth to MWS

PAN9028 Bluetooth Module 2 Overview

2.7 WLAN

2.8 Bluetooth

Туре	Features
General	Supports Bluetooth 5
	Shared LNA for Bluetooth
	Digital Audio Interface including PCM interface for voice application
	Bluetooth and WLAN coexistence

_

⁵ India channels that can be used in other countries as well.

⁶ India use only.

Туре	Features
Bluetooth Classic (BR/EDR)	 Bluetooth Classic with Bluetooth Class 1 support Baseband and radio Basic Rate (BR) and Enhanced Data Rate (EDR) packet
(=: -,	types with 1 Mbps (GFSK), 2 Mbps (π/4-DQPSK) and 3 Mbps (8DPSK)
	Fully functional Bluetooth baseband with:
	 Adaptive Frequency Hopping (AFH) Forward error correction Header error control Access code correlation CRC Encryption bit stream generation Whitening
	Adaptive Frequency Hopping (AFH) including Packet Loss Rate (PLR)
	Interlaced scan for faster connection setup
	Simultaneous 7 active ACL connection support
	Automatic ACL packet type selection
	Full master and slave piconet support
	Scatternet support
	Standard UART and SDIO HCI transport layer
	 3 SCO/eSCO links with hardware accelerated audio signal processing and hardware supported PPEC algorithm for speech quality improvement
	All standard SCO/eSCO voice coding
	All standard pairing, authentication, link key, and encryption operations
	 Standard Bluetooth power saving mechanism (i.e. hold, sniff modes, and sniff-sub rating)
	Enhanced Power Control (EPC)
	Channel Quality Driven (CQD) data rate
	Wideband Speech (WBS) support (1 WBS link)
	Encryption (AES) support
	LTE/MWS coexistence
	Bluetooth 2.1 to 5.0 Core Specification Support
	Packet types
	 ACL (DM1, DH1, DM3, DH3, DM5, DH5, 2-DH1, 2-DH3, 2-DH5, 3-DH1, 3-DH3, 3-DH5) SCO (HV1, HC3)
	– eSCO (EV3, EV4, EV5, 2EV3, 3EV3, 2EV5, 3EV5)
	Profile Support
	 A2DP Source/Sink AVRCP Target/Controller HFP Dev/gateway OPP Server/Client PAN Traffic SPP HID PBAP

Туре	Features
Bluetooth Low Energy (LE)	 Broadcaster, Observer, Central, and Peripheral roles Supports link layer topology to be master and slave (connects up to 16 links) Shared RF with BR/EDR Encryption AES support Hardware support for intelligent Adaptive Frequency Hopping (AFH) LE Privacy 1.2 LE Secure Connection LE Data Length Extension LE Advertising Length Extension High Duty Cycle Directed Advertising 2 Mbps LE Bluetooth Low Energy 4.0 to 5.0 Support Direction Finding Connectionless Angle of Departure (AoD) Connection-oriented Angle of Arrival (AoA) Profile Support GATT HOGP

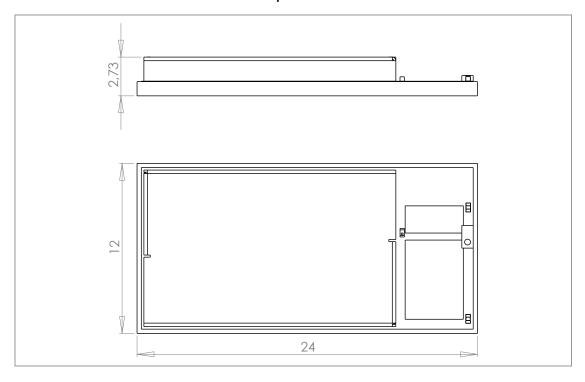

3 Detailed Description

3.1 Dimensions

All dimensions are in millimeters.

Top View

No.	Item	Dimension	Tolerance	Remark
1	Width	12.00	±0.35	
2	Length	24.00	±0.35	
3	Height	2.75	±0.20	With case

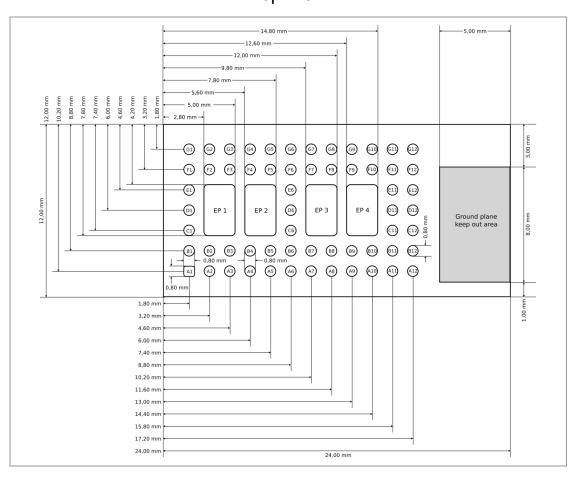

3.2 Footprint

The outer dimensions have a tolerance of ± 0.35 mm.

Top View

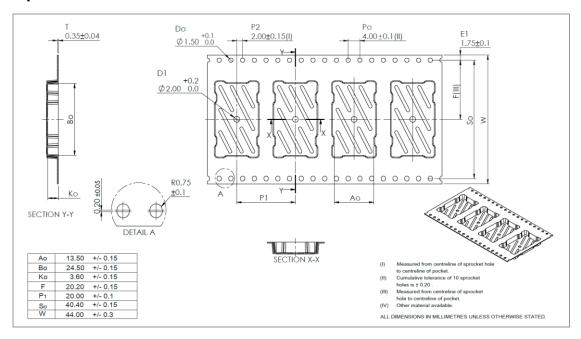

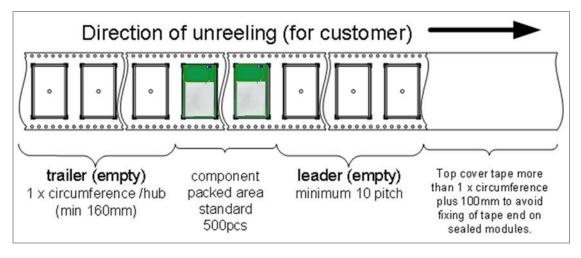

3.3 Packaging

The module is a mass production status product and will be delivered in the package described below.

3.3.1 Tape Dimensions

3.3.2 Packing in Tape

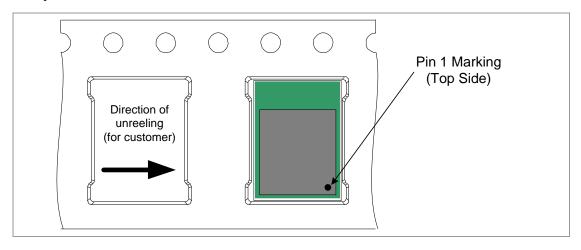

Empty spaces in the component packed area shall be less than two per reel and those spaces shall not be consecutive.

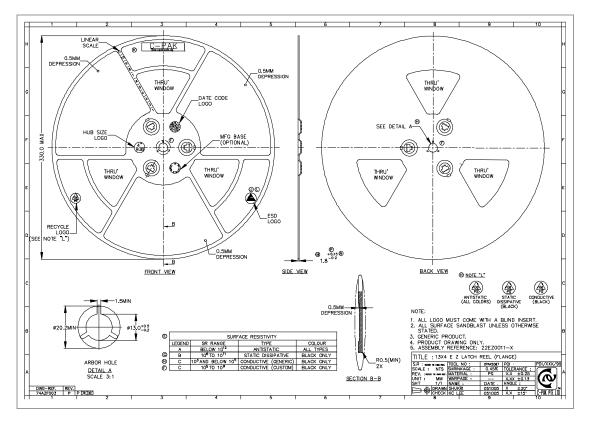

The top cover tape shall not be found on reel holes and it shall not stick out from the reel.

3.3.3 Component Direction

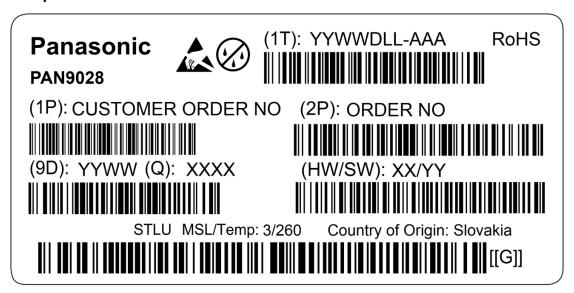

3.3.4 Reel Dimension

3.3.5 Package Label

Example:

(1T) Lot code

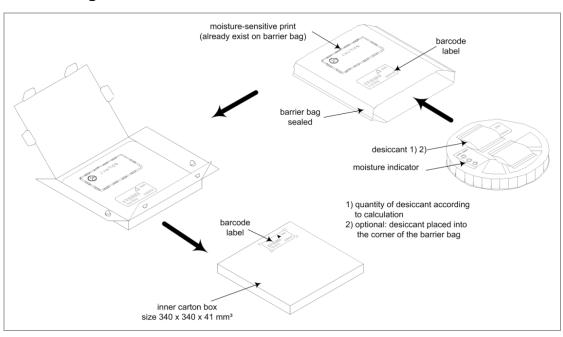

(1P) Customer order number, if applicable

(2P) Order number(9D) Date code

(Q) Quantity

(HW/SW) Hardware/software version

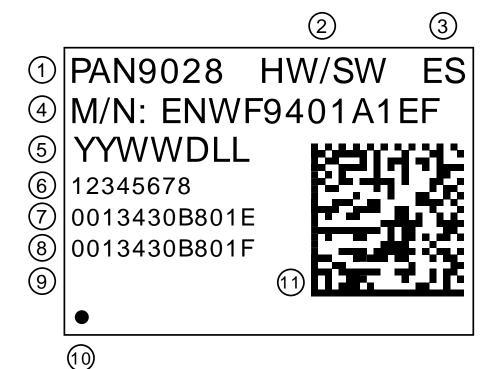

3.3.6 Total Package

3.4 Case Marking

Example:

- 1 Brand name
- 2 Hardware/software version
- 3 Engineering Sample (optional)
- 4 Order number
- 5 Lot code
- 6 Serial number
- 7 WLAN MAC address
- 8 BD address
- 9 (Reserved)
- 10 Marking for Pin 1
- 11 2D barcode, for internal usage only

PAN9028 Bluetooth Module 4 Specification

4 Specification

All specifications are over temperature and process, unless indicated otherwise.

4.1 Default Test Conditions

1

Temperature: $25 \,^{\circ}\text{C} \pm 10 \,^{\circ}\text{C}$ Humidity: $40 \text{ to } 85 \,^{\circ}\text{RH}$

Supply Voltage: +3.3 V (for module variant ENWF490xA1EF)

Supply Voltage: +3.3 V / +2.2 V / +1.8 V / +1.1 V (for module variant

ENWF490xA2EF)

4.2 Absolute Maximum Ratings

The maximum ratings may not be exceeded under any circumstances, not even momentarily or individually, as permanent damage to the module may result.

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
T _{STOR}	Storage temperature		-40		+85	°C
V _{ESD}	ESD robustness	All pads, according to human body model (HBM), JEDEC STD 22, method A114			1 000	V
		According to charged device model (CDM), JEDEC STD 22, method C101			500	V
P _{RF}	RF input level				+2	dBm
V _{DD3V3}	Maximum	Maximum power supply voltage from any pin with respect to		3.3	4	V
V_{DD2V2}	voltage			2.2	2.3	V
V_{DD1V8}		V _{SS} (GND)		1.8	1.98	V
V_{DD1V1}				1.1	1.21	V
V _{IOSD}				1.8	2.2	V
				3.3	4	V
V _{IO}				1.8	2.2	V
				3.3	4	V
V _{RF_SW1/2}				3.3	4	V

PAN9028 Bluetooth Module 4 Specification

4.3 Recommended Operating Conditions

The maximum ratings may not be exceeded under any circumstances, not even momentarily or individually, as permanent damage to the module may result.

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
T _A	Ambient operating temperature range	Extended grade	-30		+85	°C
V _{DD3V3}	3.3 V supply voltage	V _{DD} voltage on pins F2, F3	3.07	3.3	3.53	V
V _{DD2V2}	2.2 V supply voltage	V _{DD} voltage on pins G1, G2 (only for module variant ENWF940[x]A2EF)	2.09	2.2	2.26	V
V_{DD1V8}	1.8 V supply voltage	V _{DD} voltage on pin G4 (only for module variant ENWF940[x]A2EF)	1.71	1.8	1.89	V
V _{DD1V1}	1.1 V supply voltage	V _{DD} voltage on pin A3 (only for module variant ENWF940[x]A2EF)	1.05	1.1	1.15	V
V _{IOSD}	Digital I/O VIOSD supply	Pin F4 with 1.8 V operation ⇒ SDIO Pin Functions	1.67	1.8	1.92	V
	voltage ⁷	Pin F4 with 3.3 V operation ⇒ SDIO Pin Functions	3.07	3.3	3.53	V
V _{IO}	Digital I/O VIO	Pin G3 with 1.8 V operation	1.67	1.8	1.92	V
	supply voltage ⁷	Pin G3 with 3.3 V operation	3.07	3.3	3.53	V
V _{RF_SW1/2}	VRF_SW1/2 switch voltage	Pin A11, B11 with 3.3 V logical level switch operation ⇒ RF-Switch Pin Function	3.07	3.3	3.6	V

-

⁷ 1.8 V or 3.3 V supply voltage possible.

PAN9028 Bluetooth Module 4 Specification

Digital Pin Characteristics

V_{IO} with 1.8 V Operation⁸

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
V _{IH}	High level input voltage	1.8 V operation (V _{IO} = 1.8 V)	0.7 V _{IO}		V _{IO} + 0.4	V
V _{IL}	Low level input voltage	1.8 V operation (V _{IO} = 1.8 V)	-0.4		0.3 V _{IO}	V
V _{HYS}	Input hysteresis		100			mV
V _{OH}	High level output voltage	1.8 V operation (V _{IO} = 1.8 V)	V _{IO} - 0.4			V
V _{HO}	Low level output voltage	1.8 V operation (V _{IO} = 1.8 V)			0.4	V

V_{IO} with 3.3 V Operation⁸

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
VIH	High level input voltage	3.3 V operation (V _{IO} = 3.3 V)	0.7 V _{IO}		V _{IO} + 0.4	V
V _{IL}	Low level input voltage	3.3 V operation (V _{IO} = 3.3 V)	-0.4		0.3 V _{IO}	V
V _{HYS}	Input hysteresis		100			mV
V _{OH}	High level output voltage	3.3 V operation (V _{IO} = 3.3 V)	V _{IO} - 0.4			V
V _{HO}	Low level output voltage	3.3 V operation (V _{IO} = 3.3 V)			0.4	V

V_{IOSD} with 1.8 V Operation for SDIO I/F⁸

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
ViH	High level input voltage	1.8 V operation (V _{IOSD} = 1.8 V)	0.7 V _{IO}		V _{IO} + 0.4	V
VIL	Low level input voltage	1.8 V operation (V _{IOSD} = 1.8 V)	-0.4		0.3 V _{IO}	V
V _{HYS}	Input hysteresis		100			mV
V _{ОН}	High level output voltage	1.8 V operation (V _{IOSD} = 1.8 V)	V _{IO} - 0.4			V
V _{HO}	Low level output voltage	1.8 V operation (V _{IOSD} = 1.8 V)			0.4	V

⁸ The capacitive load should not be larger than 50 pF for all I/Os when using the default driver strength settings. Large capacitive loads increase the overall current consumption.

PAN9028 Bluetooth Module

4 Specification

V_{IOSD} with 3.3 V Operation for SDIO I/F⁸

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
V _{IH}	High level input voltage	3.3 V operation (V _{IOSD} = 3.3 V)	0.7 V _{IO}		V _{IO} + 0.4	V
V _{IL}	Low level input voltage	3.3 V operation (V _{IOSD} = 3.3 V)	-0.4		0.3 V _{IO}	V
V _{HYS}	Input hysteresis		100			mV
V _{OH}	High level output voltage	3.3 V operation (V _{IOSD} = 3.3 V)	V _{IO} - 0.4			V
Vно	Low level output voltage	3.3 V operation (V _{IOSD} = 3.3 V)			0.4	V

4.4 Current Consumption

4.4.1 For ENWF940[x]A1EF

The current consumption depends on the user scenario and on the setup and timing in the power modes. Following current consumptions are valid for module variant ENWF940[x]A1EF.

Assume $V_{DD} = 3.3 \text{ V}$, $T_{amb} = 25 \,^{\circ}\text{C}$, if nothing else stated.

Parameter	Condition		Min.	Тур.	Max.	Unit
IVDD3V3 @ PMIC_EN	Power Down	Grounding of PMIC_EN pin		TBD		mA
I _{VDD3V3} @ DeepSleep	Deep Sleep	Low-power state used in sleep state		TBD		mA
IVDD3V3 @ Firmware Init	Firmware Initialization	Device Initialization			TBD	mA

WLAN Current Consumption

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
IVDD3V3 @ TX	Active Transmit ⁹	P_{TX} = +TBD dBm for 5 GHz band 802.11a at 6 Mbps		TBD		mA
		P_{TX} = +TBD dBm for 5 GHz band 802.11n 20 MHz at 72 Mbps		TBD		mA
		P_{TX} = +TBD dBm for 5 GHz band 802.11ac 80 MHz at 433 Mbps		TBD		mA
		P_{TX} = +TBD dBm for 2.4 GHz band 802.11b at 11 Mbps		TBD		mA
		P _{TX} = +TBD dBm for 2.4 GHz band 802.11g at 54 Mbps		TBD		mA

⁹ Peak values for specified output power level and data rate with UDP traffic between the AP and Device (STA).

Product Specification Rev. 0.2

PAN9028 Bluetooth Module

4 Specification

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
		P _{TX} = +TBD dBm for 2.4 GHz band 802.11n 40 MHz at 150 Mbps		TBD		mA

	Peak LE	$P_{TX} = +TBD dBm$		TBD		mA
IVDD3V3 @ RX	Peak BR			TBD		mA
	Peak EDR			TBD		mA
	Peak LE			TBD		mA
ISCAN BT	Page/Inquiry Scan	1.28 s at normal mode		TBD		mA
I _{A2DP BT}	A2DP	BR/EDR at 330 kbps (3M baud rate)		TBD		mA

4.4.2 For ENWF940[x]A2EF

The current consumption depends on the user scenario, on the setup, and timing in the power modes. Following current consumptions are valid for module variant ENWF940[x]A2EF.

Assume $V_{DD3V3}=3.3$ V, $V_{DD2V2}=2.2$ V, $V_{DD1V8}=1.8$ V, $V_{DD1V1}=1.1$ V and $T_{amb}=25$ °C, if nothing else stated.

-

¹⁰ In IEEE Power Save the device automatically wakes up on beacons. This is dependent on the DTIM value of the AP it is connected to. If it is a DTIM value of 1 along with a beacon interval of 100 ms, the device wakes up every 100 ms.

fsleepclk (only for module variant ENWF940[x]A1E F)	Sleep Clock frequency	Frequency tolerance < ±30 ppm over operating temperature, aging and process, CMOS input clock signal type		32.768		kHz

PAN9028 Bluetooth Module 4 Specification

4.6 External Sleep Clock Specifications (only for Module Variant ENWF940[x]A2EF)

An external sleep clock of 32.768 kHz can be used for lowest current consumption in sleep mode. Voltage level of external sleep clock must be the same value which is used for Pin G4 (V_{IO}).

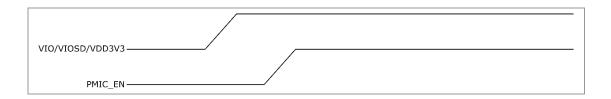

Parameter	Min.	Тур.	Max.	Units
Clock frequency range/accuracy		32.768		kHz
CMOS input clock signal type				
• ±250 ppm (initial, aging, temperature)				
Phase noise requirement (at 100 kHz)		-125		dBc/Hz
Cycle jitter		1.5		ns (RMS)
Slew rate limit (10 % to 90 %)			100	ns
Duty cycle tolerance	20		80	%

4.7 Power-up Sequence

For Module Variant ENWF940[x]A1EF:

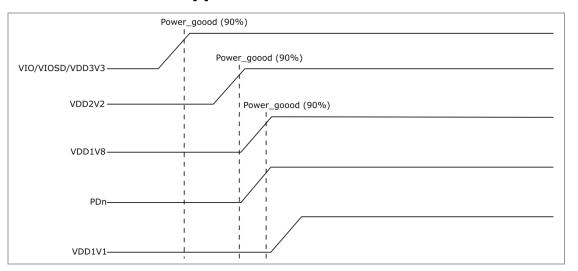

A minimum time of 100 ms is required after PMIC_EN is de-asserted (low) and before it is asserted (high).

PAN9028 Bluetooth Module 4 Specification

For Module Variant ENWF940[x]A2EF:

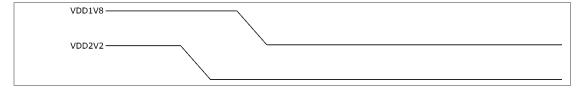

- V_{IO}/V_{IOSD}/V_{DD3V3} must be good (90 %) before or at the same time all other power supplies start ramping up.
- V_{IO}/V_{IOSD}/V_{DD3V3} must be good (90%) before or at the same time PDn starts ramping up.
- V_{DD2V2} must be good (90 %) before or at the same time V_{DD1V8} starts ramping up.
- It is recommended to start ramping up VDD1V8 ≤ 1ms after V_{DD2V2} ramps up.
- V_{DD1V8} must be good (90 %) before or at the same time VDD1V1 starts ramping up.
- Ramp-up time of V_{IO}/V_{IOSD}/V_{DD3V3} must be < 100 ms.
- Ramp-up time of V_{DD2V2} / V_{DD1V8} must be < 100 ms.
- Ramp-up time of V_{DD1V1} must be < 5ms.
- All supplies must be monotonic.

4.8 Power-down Sequence

For Module Variant ENWF940[x]A1EF:

Power down sequencing is performed from internal power management IC after PMIC_EN pin is pulled to low state.

For Module Variant ENWF940[x]A2EF:

- It is recommended to ramp down VDD1V8 after VDD2V2 ramps down.
- It is recommended to discharge all of the power supplies to less than 0.2V to reduce leakage
- PDn must be asserted when powering down the module

PAN9028 Bluetooth Module 4 Specification

Power Good (only for Module Variant ENWF940[x]A1EF) 4.9

Do not connect the power good outputs (PG1, PG2, and PGLDO) if they are not used.

The PAN9028 contains power good comparators, which pull the signal to a logical low level, when the associated output voltage drops below 90 % of its regulated value. Also, when the associated rising output voltage is above 95 % of its regulated value, the power good comparators pull the signal to a logical low level.

No.	Pin Name	Pin Type	Logical Level			
			Low (typ. 0 V)	High (typ. 3.3 V)		
B1	PG1	Output signal	1.1 V voltage supply not stabilized	1.1 V voltage supply stabilized		
D1	PG2	Output signal	2.2 V voltage supply not stabilized	2.2 V voltage supply stabilized		
C1	PGLDO	Output signal	1.8 V voltage supply not stabilized	1.8 V voltage supply stabilized		

Interfaces 4.10

4.10.1 **Host Interface**

4.10.1.1 **SDIO Interface**

The SDIO Interface pins are powered from the V_{IOSD} voltage supply with either 3.3 V or 1.8 V. The SDIO electrical specifications are identical for the 1-bit and 4-bit SDIO modes.

Operating Conditions.

SDIO Timing Data - Default and High-Speed Modes (V_{IOSD} 3.3 V)^{11,12}

Symbol	Parameter	Condition	Min.	Тур.	Max.	Units
f _{PP}	Clock frequency	Normal	0		25	MHz
		High-speed	0		50	MHz
T _{WL}	Clock low time	Normal	10			ns
		High-speed	7			ns

¹¹ For SDIO 2.0 running at 50 MHz clock frequency, a supply voltage VIOSD of 1.8 V is recommended.

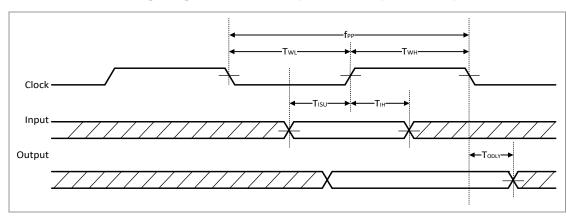

¹² For SDIO 2.0 running at 25 MHz clock frequency, either 1.8 V or 3.3 V can be used.

PAN9028 Bluetooth Module 4 Specification

4.10.1.2 High-Speed UART Interface

The High-Speed UART Interface pins are powered from the V_{10} voltage supply with either 3.3 V or 1.8 V.

For DC specifications please refer to "Digital Pin Characteristics" \Rightarrow 4.3 Recommended Operating Conditions.

The UART interface operation includes:

- Support data input/output operations for peripheral devices connected through a standard UART interface
- 4-wire data transfer (RxD, TxD, RTS and CTS) or 6-wire data transfer (RxD, TxD, RTS, CTS, DSR, and DTR)
- Programmable baud rate (1 200 bps to 4 Mbps)
- Data format (LSB first)
- Data bit: (5 bit to 8 bit)
- Parity bit: (0 bit to 4 bit)
- Stop bit: (1 bit to 2 bit)

Interface Signals

Pin No.	Signal Name	Specification Name	Туре	Description
B8	UART_SOUT	TxD	Host Controller	Transmit data output
A8	UART_SIN	RxD	Interface (HCI)	Receive data input
A7	UART_RTS	RTS		Request to send (active low)
A6	UART_CTS	CTS		Clear to send (active low)
B6	UART_DSR	DSR	optional	Data set ready (active low)
B7	UART_DTR	DTR		Data terminal ready (active low)

Interface Transport Settings

Item	Range	Default	Comment

Symbol	Parameter	Condition	Тур.	Units
Іон	Switching current high	Tristate on pin (requires pull-up)	Tristate when driving high	mA
loL	Switching current low	At 0.4 V	10	mA

4.10.3 Audio Interface: PCM Interface

Interface Signals

Pin No.	Signal Name	Specification Name	Туре	Description
F7	PCM_DOUT	DOUT	Output	PCM data
E1	PCM_CLK	CLK	Input/Output	PCM clock signal, output if PCM master, input if PCM slave
E1	PCM_MCLK	MCLK	Output	PCM clock signal (optional), optional clock used for some codecs, derived from PCM_CLK
E11	PCM_DIN	DIN	Input	PCM data
F6	PCM_SYNC	SYNC	Input/Output	PCM Sync pulse signal, output if PCM master, input if PCM slave

Modes of Operation

The PCM Interface supports two modes of operation:

- PCM master
- PCM slave

When in PCM master mode, the interface generates a 2 MHz or a 2.048 MHz PCM_CLK and a 8 kHz PCM_SYNC signal. An alternative PCM master mode is available that uses an externally generated PCM_CLK, but still generate the 8 kHz PCM_SYNC. The external PCM_CLK must have a frequency that is an integer multiple of 8 kHz. Supported frequencies are in the 512 kHz to 4 MHz range.

When in PCM slave mode, the interface has both PCM_CLK and PCM_SYNC as inputs, thereby letting another unit on the PCM bus generate the signals.

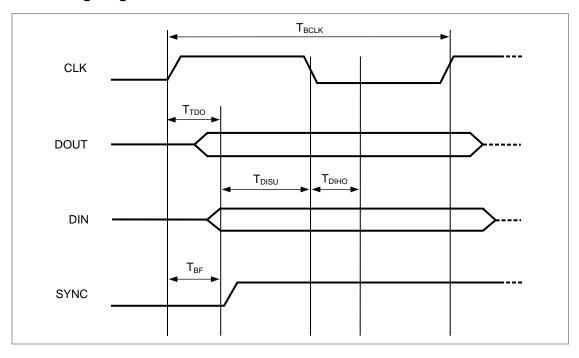

PAN9028 Bluetooth Module 4 Specification

The PCM interface consists of up to four PCM slots (time-divided) preceded by a PCM sync signal. Each PCM slot can be either 8 bits or 16 bits wide. The slots can be separated in time, but they are not required to follow immediately after another. The timing is relative to PCM_SYNC.

PCM Timing Data - Master Mode

Symbol	Min.	Тур.	Max.	Units

Minimum receive sensitivity BPSK, CR 1/2 (6 Mbps) dBm PER ≤ 10 % -90 -82 -79 dBm BPSK, CR 3/4 (9 Mbps) PER ≤ 10 % -90 QPSK, CR 1/2 (12 Mbps) PER ≤ 10 % -89 -77 dBm QPSK, CR 3/4 (18 Mbps) PER ≤ 10 % -87 -74 dBm 16-QAM, CR 1/2 (24 Mbps) PER ≤ 10 % -70 dBm 16-QAM, CR 3/4 (36 Mbps) -81 -66 dBm PER ≤ 10 % 64-QAM, CR 2/3 (48 Mbps) -77 -65 dBm PER ≤ 10 % 64-QAM, CR 3/4 (54 Mbps) -75 -64 dBm $PER \leq 10~\%$ -30 Maximum input level PER ≤ 10 % dBm Adjacent channel rejection BPSK, CR 1/2 (6 Mbps) PER ≤ 10 % 16 dΒ

4.11.3 Bluetooth RF Characteristics

For module variant ENWF940[x]A1EF assume V_{DD3V3} = 3.3 V, V_{IOSD} = 3.3 V, V_{IO} = 3.3 V and T_{amb} = 25 °C, if nothing else stated.

PER ≤ 10 %

-1

For module variant ENWF940[x]A2EF assume $V_{DD3V3}=3.3$ V, $V_{DD2V2}=2.2$ V, $V_{DD1V8}=1.8$ V, $V_{DD1V1}=1.1$ V, $V_{IOSD}=3.3$ V, $V_{IO}=3.3$ V and $T_{amb}=25$ °C, if nothing else stated.

 50Ω terminal load connected to the RF connector.

64-QAM, CR 3/4 (54 Mbps)

4.11.3.1 Receiver Section RF Characteristics

Parameter	Condition	Condition		Тур.	Max.	Units
RF frequency range			2 400		2 483.5	MHz
Interference Performance GFSK (Basic Rate)	GFSK	C/I (Co-channel)			11	dB
	DCI 67 dDm	C/I (1 MHz)			0	dB
C/I Ratio	RSL = -67 dBm BER ≤ 0.1 %	C/I (2 MHz)			-30	dB
		C/I (3 MHz)			-40	dB
		C/I (Image)			-9	dB
		C/I (Image ± 1 MHz)			-20	dB

PAN9028 Bluetooth Module

4 Specification

Parameter	Condition		Min.	Тур.	Max.	Units
Interference Performance	π/4-DQPSK	C/I (Co-channel)			13	dB
(Enhanced Data Rate)	DCI 67 dDm	C/I (1 MHz)			0	dB
C/I Ratio	RSL= -67 dBm BER ≤ 0.01 %	C/I (2 MHz)			-30	dB
		C/I (3 MHz)			-40	dB
		C/I (Image)			-7	dB
		C/I (Image ± 1 MHz)			-20	dB
	8-DPSK	C/I (Co-channel)			21	dB
	RSL = -67 dBm	C/I (1 MHz)			5	dB
	BER ≤ 0.01 %	C/I (2 MHz)			-25	dB
		C/I (3 MHz)			-33	dB
		C/I (Image)			0	dB
		C/I (Image ± 1 MHz)			-13	dB
Interference Performance	GFSK	C/I (Co-channel)			21	dB
(Low Energy)	RSL = -67 dBm	C/I (1 MHz)			15	dB
C/I Ratio	BER ≤ 0.1 %	C/I (2 MHz)			-17	dB
	1 Mbps	C/I (3 MHz)			-27	dB
		C/I (Image)			-9	dB
		C/I (Image ± 1 MHz)			-15	dB
	GFSK	C/I (Co-channel)			21	dB
	RSL = -67 dBm BER ≤ 0.1 %	C/I (2 MHz)			15	dB
		C/I (3 MHz)			-17	dB
		C/I (6 MHz)			-27	dB
	2 Mbps	C/I (Image)			-9	dB
		C/I (Image ± 2 MHz)			-15	dB
Minimum Receive Sensitivity	BR, DH1	BER ≤ 0.1 %		-94	-70	dBm
	EDR, 2DH1	BER ≤ 0.01 %		-90	-70	dBm
	LE, GFSK	BER ≤ 0.1 %		-90	-70	dBm
Out-of-band blocking	GFSK	30 MHz to 2 000 MHz			-10	dB
(Basic Rate)	RSL = -67 dBm	2 GHz to 2.399 GHz			-27	dB
Interfering Signal Power	BER ≤ 0.1 %	2.484 GHz to 3 GHz			-27	dB
		3 GHz to 12.75 GHz			-10	dB
Out-of-band blocking	GFSK	30 MHz to 2 000 MHz			-30	dB
(Low Energy)	RSL = -67 dBm	2 GHz to 2.399 GHz			-35	dB
Interfering Signal Power	BER ≤ 0.1 %	2.484 GHz to 3 GHz			-35	dB
		3 GHz to 12.75 GHz			-30	dB
RSSI Range	Resolution = 1 dB			-90	0	dB

4 Specification

PAN9028 Bluetooth Module

4.11.3.2 Transmitter Section RF Characteristics

Parameter	Condition	Condition		Тур.	Max.	Units
RF frequency range					2 483.5	MHz
Maximum output power	Basic Rat	e (BR)		+8		dBm
	Enhanced	d Data Rate (EDR)		+6		dBm
	Low ener	gy (LE)		+6		dBm
Gain range	Gain Con	trol		30		dB
Gain resolution				0.5		dB
Spurious emission (BR)	± 500 kHz	± 500 kHz			-20	dBc
(in-band)	± 2 MHz,	± 2 MHz, M-N = 2			-20	dBm
	± 3 MHz o	± 3 MHz or greater, M-N ≥ 3			-40	dBm
Spurious emission (EDR)	± 1 MHz	± 1 MHz			-26	dBc
(in-band)	± 1.5 MHz	± 1.5 MHz			-20	dBm
	± 2.5 MHz	± 2.5 MHz			-40	dBm
Spurious emission (LE)	1 Mbps	± 2 MHz, M-N = 2			-20	dBm
(in-band)		± 3 MHz or greater, M-N ≥ 3			-30	dBm
	2 Mbps	± 4 MHz, M-N = 4			-20	dBm
		± 5 MHz, M-N = 5			-20	dBm
		± 6 MHz or greater, M-N ≥ 6			-30	dBm

4.12 Reliability Tests

The measurement should be done after the test device has been exposed to room temperature and humidity for one hour.

No.	Item	Limit	Condition
1	Vibration test	Electrical parameter are in specification	Freq.: 10~50 Hz; Amplitude: 1.5 mm; 20 min./cycle, 1 h each of XYZ axis
2	Shock test		Dropped 3 times onto hard wood from a height of 1 m
3	Heat cycle test		-30 °C for 30 min. and 85 °C for 30 min.; each temperature 300 cycles
4	Moisture test		60 °C, 90 % RH, 300 h
5	Low temperature test		-40 °C, 300 h
6	High temp. test		85 °C, 300 h

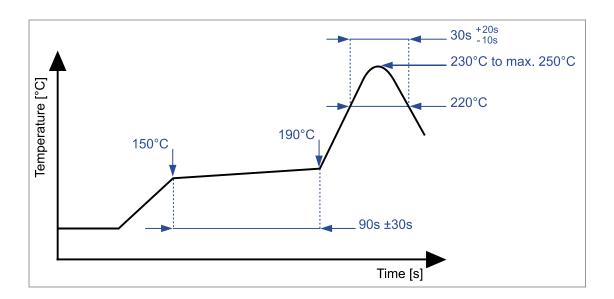

PAN9028 Bluetooth Module 4 Specification

4.13 Recommended Soldering Profile

- Reflow permissible cycles: 2
- Opposite side reflow is prohibited due to module weight
- More than 75 percent of the soldering area shall be coated by solder
- The soldering profiles should be adhered to in order to prevent electrical or mechanical damage
- Soldering profile assumes lead-free soldering

PAN9028 Bluetooth Module 5 Cautions

5 Cautions

Failure to follow the guidelines set forth in this document may result in degrading of the module functions and damage to the module.

5.1 Design Notes

- 1. Follow the conditions written in this specification, especially the control signals of this module.
- 3. The supply voltage must be free of AC ripple voltage (for example from a battery or a low noise regulator output). For noisy supply voltages, provide a decoupling circuit (for example a ferrite in series connection and a bypass capacitor to ground of at least 47 μF directly at the module).
- 4. This module should not be mechanically stressed when installed.
- 5. Keep this module away from heat. Heat is the major cause of decreasing the life time of these modules.
- 6. Avoid assembly and use of the target equipment in conditions where the module temperature may exceed the maximum tolerance.
- 7. Keep this module away from other high frequency circuits.
- 8. Refer to the recommended pattern when designing a board.

5.2 Installation Notes

- Reflow soldering is possible twice based on the conditions set forth in
 ⇒ 4.13 Recommended Soldering Profile. Set up the temperature at the soldering portion
 of this module according to this reflow profile.
- Carefully position the module so that the heat will not burn into printed circuit boards or affect other components that are susceptible to heat.
- 3. Carefully locate the module, to avoid an increased temperature caused by heat generated by neighboring components.
- 4. If a vinyl-covered wire comes into contact with the module, the wire cover will melt and generate toxic gas, damaging the insulation. Never allow contact between a vinyl cover and these modules to occur.
- 5. This module should not be mechanically stressed or vibrated when reflowed.
- 6. To repair the board by hand soldering, follow the conditions set forth in this chapter.
- 7. Do not wash this product.
- 8. Pressing on parts of the metal cover or fastening objects to the metal will cause damage to the module.

PAN9028 Bluetooth Module 5 Cautions

5.3 Usage Condition Notes

- Take measures to protect the module against static electricity.
 If pulses or transient loads (a large load, which is suddenly applied) are applied to the modules, check and evaluate their operation before assembly of the final products.
- 2. Do not use dropped modules.
- 3. Do not touch, damage, or soil the pins.
- 4. Follow the recommended condition ratings about the power supply applied to this module.
- 5. Electrode peeling strength: Do not apply a force of more than 4.9 N in any direction on the soldered module.
- Pressing on parts of the metal cover or fastening objects to the metal cover will cause damage.
- 7. These modules are intended for general purpose and standard use in general electronic equipment, such as home appliances, office equipment, information, and communication equipment.

5.4 Storage Notes

- 1. The module should not be stressed mechanically during storage.
- 2. Do not store these modules in the following conditions or the performance characteristics of the module, such as RF performance will be adversely affected:
- Storage in salty air or in an environment with a high concentration of corrosive gas, such as Cl₂, H₂S, NH₃, SO₂, or NO_X,
- Storage in direct sunlight,
- Storage in an environment where the temperature may be outside the range of 5 °C to 35 °C, or where the humidity may be outside the 45 % to 85 % range,
- Storage of the modules for more than one year after the date of delivery storage period:
 Please check the adhesive strength of the embossed tape and soldering after 6 months of storage.
- 3. Keep this module away from water, poisonous gas, and corrosive gas.
- 4. This module should not be stressed or shocked when transported.
- 5. Follow the specification when stacking packed crates (max. 10).

5.5 Safety Cautions

These specifications are intended to preserve the quality assurance of products and individual components.

Before use, check and evaluate the operation when mounted on your products. Abide by these specifications without deviation when using the products. These products may short-circuit. If electrical shocks, smoke, fire, and/or accidents involving human life are anticipated when a short circuit occurs, provide the following failsafe functions as a minimum:

PAN9028 Bluetooth Module 5 Cautions

- 1. Ensure the safety of the whole system by installing a protection circuit and a protection device.
- 2. Ensure the safety of the whole system by installing a redundant circuit or another system to prevent a single fault causing an unsafe status.

5.6 Other Cautions

- Be sure to provide an appropriate fail-safe function on your product to prevent any additional damage that may be caused by the abnormal function or the failure of the module.
- 3. This module has been manufactured without any ozone chemical controlled under the Montreal Protocol.
- 4. These modules are not intended for use under the special conditions shown below. Before using these modules under such special conditions, carefully check their performance and reliability under the said special conditions to determine whether or not they can be used in such a manner:
- In liquid, such as water, salt water, oil, alkali, or organic solvent, or in places where liquid may splash,
- In direct sunlight, outdoors, or in a dusty environment,
- In an environment where condensation occurs,
- In an environment with a high concentration of harmful gas (e. g. salty air, HCl, Cl₂, SO₂, H₂S, NH₃, and NO_x).
- If an abnormal voltage is applied due to a problem occurring in other components or circuits, replace these modules with new modules, because they may not be able to provide normal performance even if their electronic characteristics and appearances appear satisfactory.

For further information please refer to the Panasonic website ⇒ 7.2.2 Product Information.

PAN9028 Bluetooth Module 5 Cautions

5.7 Restricted Use

5.7.1 Life Support Policy

This Panasonic Industrial Devices Europe GmbH product is not designed for use in life support appliances, devices, or systems where malfunction can reasonably be expected to result in a significant personal injury to the user, or as a critical component in any life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

Panasonic customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Panasonic Industrial Devices Europe GmbH for any damages resulting.

5.7.2 Restricted End Use

This Panasonic Industrial Devices Europe GmbH product is not designed for any restricted activity that supports the development, production, handling usage, maintenance, storage, inventory or proliferation of any weapons or military use.

Transfer, export, re-export, usage or reselling of this product to any destination, end user or any end use prohibited by the European Union, United States or any other applicable law is strictly prohibited.

7.1 Ordering Information

Variants and Versions

Order Number	Brand Name	Description	MOQ ¹⁵
ENWF9408A1EF ¹⁶	PAN9028	Wi-Fi/Bluetooth radio module IEEE 802.11 a/b/g/n/ac Bluetooth/Bluetooth LE 5 with a ceramic chip-antenna, Multi-region version certified for US, EU, and CA ¹⁷	1 000
ENWF9408A2EF ¹⁶	PAN9028	Wi-Fi/Bluetooth radio module IEEE 802.11 a/b/g/n/ac Bluetooth/Bluetooth LE 5 with a ceramic chip-antenna, without PMIC 88PG823 and without 32 kHz crystal, Multiregion version certified for US, EU, and CA ¹⁷	1 000
ENWF9408AXEF	PAN9028-IMX	i.MX6+PAN9028 Development Kit: 1× PAN9028 MicroSD Adapter, 1× Wandboard WBIMX6U, 1× MicroSD Card, 1× Adapter cable USB-A to DC 5.5/2.5mm plug	1
ENWF9408AWEF	PAN9028-MSD	PAN9028 MicroSD Adapter with module ENWF9408A1EF	1

-

¹⁵ Abbreviation for Minimum Order Quantity (MOQ). The default MOQ for mass production is 1000 pieces, fewer only on customer demand. Samples for evaluation can be delivered at any quantity via the distribution channels.

¹⁶ Samples are available on customer demand.

¹⁷ The multi-region version is restricted to FCC, European ETSI, and Canadian ISED regulatory domain with blocked Tx power table, which is stored on the OTP memory of device. The device does not support the channels 12 to13 in the 2.4 GHz band. DFS and passive scanning mechanism are not necessary as only the non-DFS channels in the 5 GHz band are supported.
