Description

RACM600-L/OF Series AC/DC power supply units are designed for operation in natural convection and in systems with certain airflow ventilation to deliver 400 to 600Watt output power. Safety approvals to Medical IEC 60601-1-2 and to IT and industrial IEC 62368 standards and operation with worldwide input voltage conditions from 80 to 275Vac in altitudes up to 5000m make these chassis mount units ideal for global use in medical, industrial or IT related automation processes. For enhanced reliability requirements of applications redundant operation is supported with active current sharing. An additional 5V Standby output powers housekeeping circuitry to control remote on/off and monitoring functions which are available via PMBus™ I²C interface. EN55032 class "B" EMC compliance is achieved without any external components which underlines the versatility of these power supplies.

PEAK LOAD CAPABILITY OF 12V & 48V MODELS (not applicable for 24V model)

Calculation Guideline for recurrent dynamic load cycles:

Peak Load calculation for recurrent dynamic loading	Units	Peak Load calculation for still air convection		Peak Load Capability with 1.5m/s airflow
		RACM600-12SL/OF	RACM600-48SL/OF	RACM600-12SL/OF RACM600-48SL/OF
P_{nom} = rated output power	[W]	≤320	≤430	≤600
P_p = peak output power	[W]	≤800	≤800	≤800
P_r = recovery output power	[W]			
t₁ = peak time set	[s]	≤5s	≤5s	≤10s
t₂ = recovery time	[s]	min. 10 x t ₁	min. 8 x t ₁	min. 3 x t ₁
k = heat dissipation factor	[]	2	2	1.2

$$P_r = \frac{P_{nom} \times (t_1 + t_2) - (P_p \times t_1)}{t_2 \times k}$$

Practical Example (RACM600-48SL/OF for still air convection):

Take the RACM600-48SL/OF at 230VAC input Voltage and full load at T_{AMB} = 50°C, with still air convection.

- P_p = 720W
- t₁ = 4s
- t₂ = 32s
- k = 2

$$P_r = \frac{380 \times (4 + 32) - (720 \times 4)}{32 \times 2} = 169W$$
