

Forced-air cooling

Water cooling

Features

- 3 ϕ 3-wire / Δ or 3 ϕ 4-wire / Y phase voltage 196~305VAC
- Wide voltage adjustment range 1~120%
- Built-in active PFC function
- High efficiency up to 95%
- Water / forced air cooling
- Output voltage and constant current level programmable
- Active current sharing up to 4 units
- Built-in remote ON-OFF control / Alarm signal
- Protections: Short circuit / Overload / Over voltage / Over temperature / Fan fail
- 5 years warranty

Applications

- Energy & power system for automation
- U.V or laser diode application
- Test and measurement instrument
- Laser related machine
- Burn-in facility
- RF application
- EV charging station
- Constant current source

Description

RST-7K5 is a 7.5KW single output enclosed type AC/DC power supply. This series operates for the wide range three phase AC input and offers the models with the DC output(115V/230V/380V) mostly demanded from the industry. The series offers models with two types of cooling methods, forced air and water cooling respectively, that can be, working for the temperature up to 70°C. Moreover, RST-7K5 provides vast design flexibility by equipping various built-in functions such as the output programming, active current sharing, remote ON-OFF control, auxiliary power, etc.

NOTE	1. All parameters NOT specially mentioned are measured at $\triangle$ 230VAC(Y 400VAC) input, rated load and 25℃ of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. 3. Tolerance includes set up tolerance, line regulation and load regulation. 4. Derating may be needed under low input voltages. Please check the derating curve for more details. 5. Without water or fan cooling to provide adequate heat dissipation, OTP might be triggered if trimming output voltage by PV signal toward upper or bottom limits of nominal voltage. Under such condition, enhanced cooling on PSU is highly recommended. 6. If use PV signal to adjust Vo, under creatin operation conditions, ripple noise of Vo might go over rating defined in this specification. 7. Need additional EMI filter to meet regulations of EMC conducted and radiated emission. Characteristics of EMI filter please refer to the table, Minimum Insertion Loss. 8. The efficiency is measured at $\triangle$: 230VAC/Y: 400VAC input. The efficiency level is measured at output voltage 115V(115V model)/216V(230V model)/334V(380V model). 9. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 600mm*900mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com) 10. The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m(6500ft). ※ Product Liability Disclaimer : For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx

1. Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim)

(1) by potentiometer (SVR)

- (a) Have the DIP switch position-3 set as 
 (b) Output voltage can be trimmed by SVR.

(2) by Output Voltage Programming

- (a) Have the DIP switch position-3 set as 
 (b) The output voltage can be trimmed to 1~120% by applying EXTERNAL VOLTAGE between PV+ and PV- on CN86 or CN87.

Fig 1.1

© The rated current should change with the Output Voltage Programming accordingly.

Fig 1.2

2.Constant Current Programming (or, PC / remote current programming / dynamic current trim)

(1)Default Overload Protection(OLP) 100~105% of rated current

- (a)Have the DIP switch position-2 set as
- (b)Output current is set default value.

(2)by Constant Current Level Programming

- (a)Have the DIP switch position-2 set as

(b)The constant current level can be trimmed to 20~100% of the rated current by applying EXTERNAL VOLTAGE between PC+ and PC- on CN86 or CN87.

Fig 2.1

Fig 2.2

⊙ Output will shut down after O/P voltage is below < 80% of Vset for 6 sec, re-power on to recover.

3.Select Overload Protection (OLP) Mode

(1)Continuous Constant Current mode

Have the DIPswitch position-1 set as , and RST-7K5 will work in continuous constant current mode when the output is overloaded and the output voltage is greater than 50% of the rated output voltage.

(2)Delay Shutdown mode

Have the DIPswitch position-1 set as , and RST-7K5 will shut down after 5 seconds of constant current operation, when the output is overloaded or short-circuited.

4.Remote ON-OFF Control

※ The power supply can be turned ON-OFF by using the "Remote ON-OFF" function.

Between Remote ON-OFF(CN96 pin5,7) and 12V-AUX(CN96 pin1,3)	Output Status
Switch close (Short)	power supply ON
Switch open (Open)	power supply OFF

5.Alarm Signal Output

※ There are 4 alarm signals on CN99, and each signal can select two types of output circuit.

- (1)Relay contact output {OTP1, OTP1-GND} ; (DC-OK1, DC-OK1-GND) ; (AC-FAIL1-GND, AC-FAIL1) ; (FAN-FAIL1-GND, FAN-FAIL1)}
Normally open contact. "Short" when the alarm arises. Relay contact rating(maximum) is 30V/1A resistive.

Fig 5.1

- (2)Open collector output {DC-OK2-GND, DC-OK2} ; (AC-FAIL2-GND, AC-FAIL2) ; (OTP2, OTP2-GND) ; (FAN-FAIL2, FAN-FAIL2-GND)}

An external voltage source is required for this function that is shown in Fig 5.2. These signals are isolated from output. The maximum sink current is 10mA and the maximum external voltage is 20V (there is a built-in 24V zener diode in inner circuitry).

Fig 5.2

6.Current Sharing

RST-7K5 has the built-in active current sharing function and can be connected in parallel, up to 4 units, to provide higher output power as exhibited below :

- ※ The power supplies should be paralleled using short and large diameter wiring and then connected to the load.
- ※ In parallel connection, power supply with the highest output Voltage will be the master unit and its Vout will be the DC bus voltage.
- ※ The total output current must not exceed the value determined by the following equation:
Maximum output current at parallel operation=(Rated current per unit) × (Number of unit) × 0.95
- ※ When the total output current is less than 5% of the total rated current, or say (5% of Rated current per unit) × (Number of unit) the current shared among units may not be balanced.
- ※ Under parallel operation ripple of the output voltage may be higher than the SPEC at light load condition. It will go back to normal ripple level once the output load is more than 5%.

If the lines of CN86 or CN87 are too long, they should be twisted in pairs to avoid the noise.

◎ CS+,CS- are connected mutually in parallel.
