1. Introduction

The TG.64 is a dipole 5G/4G antenna designed for use with the next generation of router and gateway applications. Covering the full 600-6000MHz cellular frequency spectrum, the TG.64 is ideal for applications where a wideband dipole antenna may be required. The TG.64 can also be used for NB-IoT, Cat-M, assisted GNSS and dual-band Wi-Fi and due to its full spectrum coverage is backwards compatible with legacy technologies such as 3G and GSM.

The TG.64 has a sleek yet robust PC+ABS enclosure allowing it to be used with a wide variety of devices. The TG.64 is designed to work with any ground plane size or in free space for ease of integration.

Typical applications include:

- Gateways and Routers
- In-Building Connectivity Systems
- Point of Sales Kiosks
- Connected Industries
- Smart Metering

The TG.64 is supplied with a hinged SMA connector for ease of mounting in MIMO systems. The dimensions of the TG.64 are 135x19.4x6 mm, meaning it can be covertly installed on routers and other similar devices unlike some of the bulkier products on the market.
