

902 – 928 MHz ISM Chip Antenna

Johanson Technology, Inc. (JTI) miniature RF ceramic chip antennas are made using Low Temperature Co-fired Ceramic (LTCC) technology which has the ability to embed low and high dielectric constants inside our antenna. This enables our components to have high detuning resilience and stability over extreme temperatures (~2ppm).

All units in mm

*Note: Ground Vias are highly recommended to have better antenna efficiency.

JTI P/Ns for Matching Network⁵

Capacitor (4.7pF): QSCF500Q4R7B1GV001T

Inductor (10nH): LRC0402CJ10NGV001T

Capacitor (0.5pF): QSCF500Q0R5B1GV001T

If you'd like the CAD PCB layout or have any questions,

⁵ It is recommended that the designer leave available slots for a "pi" (or shunt-series-shunt) network. The antenna matching network values above are used when the antenna is mounted on Johanson's evaluation board. The optimal matching values will vary depending on the layout, thickness, material, etc. Go to: <https://www.johansontechnology.com/tuning> for more information.
