

Photoelectrics

Laser, Retro-reflective, Polarized

Type LD32CNP10

CARLO GAVAZZI

- Miniature sensor range
- Range: 0.1-1 m, with reflector
- Sensitivity adjustment by Teach-In programming
- Modulated, red laser light 650 nm, polarized (class 2)
- Supply voltage: 10 to 30 VDC
- Output: 100 mA, NPN or PNP preset
- Make and break switching function programmable
- LED for output indication and power ON
- Protection: reverse polarity, short circuit and transients
- Cable and plug versions
- Excellent EMC performance

Product Description

The LD32CNP10 sensor family comes in a compact 12 x 32 x 20 mm reinforced PMMA/ABS-housing. The sensors are useful in applications where high-accuracy detection as well as small size is required. The Teach-In function for

adjustment of the sensitivity makes the sensors highly flexible. The output type is preset (NPN or PNP), and the output switching function is programmable (NO or NC). The small laser spot makes it possible to detect small objects very precisely.

Specifications

Rated operating distance (S_n)	Up to 1.0 m, with reflector 51 x 51 mm (ER5060)	Protection	Short-circuit, reverse polarity and transients
Blind zone	100 mm	Laser protection class	Class 2 - according to EN60825-1-3/97
Sensitivity	Adjustable by Teach-In (push button or wire)	Average power	< 1 mW
Temperature drift	≤ 1%/°C	Pulse width	t = 3 μs
Hysteresis (H) (differential travel)	≤ 10%	Pulse repetition time	f = 5 kHz
Rated operational volt. (U_B)	10 to 30 VDC (ripple included)	MTBF	> 50'000 h @ T _a = 40°C
Ripple (U_{rip})	≤ 10%	Light source	Red laser light, 650 nm
Output current Continuous (I _a) Short-time (I)	≤ 100 mA ≤ 100 mA (max. load capacity 100 nF)	Light type	Red, modulated
No load supply current (I_o)	≤ 25 mA @ 24 VDC	Sensing angle	< 0.8°
Minimum operational current (I_m)	0.5 mA	Ambient light	5,000 lux
OFF-state current (I_r)	≤ 100 μA	Light spot	< 1 mm @ 300 mm
Voltage drop (U_d)	≤ 2.4 VDC @ 100 mA	Operating frequency	1000 Hz
		Response time OFF-ON (t _{ON}) ON-OFF (t _{OFF})	≤ 0.5 ms ≤ 0.5 ms
		Power ON delay (t_v)	≤ 300 ms
		Output function NPN and PNP NO/NC switching function	Preset Set up by button

Specifications (cont.)

External Teach (ET) Same function as button Locked (disable teach button) Operating mode	10 to 30 VDC 0 to 2.5 VDC Not connected	Vibration	10 to 55 Hz, 0.5 mm/7.5 g (IEC 60068-2-6)
Indication Output ON Signal stability ON and power ON	LED, yellow LED, green	Shock	30 g / 11ms, 3 pos, 3 neg per axis (IEC 60068-2-6, 60068-2-32)
Environment Installation category	II (IEC 60664/60664A; 60947-1)	Rated insulation voltage	500 VAC (rms)
Pollution degree	3 (IEC 60664/60664A; 60947-1)	Housing material Body Front material	ABS, black PMMA, red
Degree of protection	IP 67 (IEC 60529; 60947-1)	Connection Cable	PUR, black, 2 m 4 x 0.14 mm ² , Ø = 3.6 mm M8, 4-pin
Ambient temperature Operating Storage	-20 to +60° C (-4 to +140° F) -20 to +80° C (-4 to +176° F)	Plug	
		Weight	Cable type: 40 g Plug type: 10 g
		CE-marking	Yes

Delivery Contents

- Photoelectric switch: LD 32 CNP 10
- Installation instruction
- **Packaging:** Cardboard box

Adjustment

Sensitivity adjustment, with static object (needed for transparent objects only)

1. Line up the sensor with the reflector. Yellow LED and green LED are ON.
2. Press the button for 3 s until both LED's flash simultaneously (the first switching point is stored).
3. Place the object in the detection area.
4. Press the button for 1 s.
 - a) The green LED flashes and stays ON: the second switching point is stored, and the sensor is ready to operate.
 - b) Both LED's flash simultaneously: the sensor cannot detect the object, no switching points are stored.

Adjustment to maximum sensitivity

1. Line up the sensor with the reflector. Press the button for 3 s until both LED's flash simultaneously.
2. Press the button again for 1 s (without object). The sensor is set to maximum sensitivity.

Sensitivity adjustment, with a running process (needed for transparent objects only)

1. Line up the sensor with the reflector. Green LED is ON. At this stage the status of the yellow LED can be ignored.
2. The running process must be the only "object" within the detection area. Press the button for 3 s until both LED's flash simultaneously.
  **3 s**
3. Press the button for at least the duration of one process cycle.
  **1 cycle**
 - a) The green LED flashes and stays ON: both switching points have been stored, and the sensor is ready to operate.
 - b) Both LED's flash simultaneously: the sensor cannot detect the object, no switching points are stored.

Programming of make and break switching function

1. Press the button for 13 s.  **13 s**
Both LED's flash alternately.
2. Release the button: the green LED flashes.
3. While the green LED flashes, the output is inverted each time the button is pressed. This is indicated by the yellow LED.
When the button is not pressed for 10 s, the current output function is stored.
The sensor is now ready for operation.

Default setting

1. Cover light emitter and receiver: Press the button for 3 s, until both LED's flash simultaneously.  **3 s**
2. Keep light emitter and receiver covered: Press the button for 1 s.  **1 s**
The sensor is set to maximum sensitivity.

NB! The Teach Input (2 WH) will work similarly to the push button, active High.
