

TAOGLAS®

Datasheet

Part No:
DSGP184B

Description

GPS L1 / GALILEO E1 / BEIDOU B1C 1575.42MHz SMD Ceramic Patch Antenna

Features:

SMD Mount Ceramic Patch Antenna
GPS L1 / GALILEO E1 / BEIDOU B1C 1575.42 MHz
Includes Additional Solder Mask
Dimensions: 18 x 18 x 4mm
RoHS & Reach Compliant

1. Introduction

The DSGP184B is a compact ceramic GPS L1 / GALILEO E1 / BEIDOU B1C 1575.42 MHz passive patch antenna, measuring just 18mm x 18mm with a low-profile height of 4mm. Its small form factor makes it ideal for space-constrained applications such as compact telematics devices, vehicle tracking and fleet management systems, wearables, and navigation devices.

The antenna is optimized for a 50mm x 50mm ground plane, operating at 1575.42 MHz with a peak gain of 1.95dBi. Designed for SMT mounting, the ceramic patch includes an additional solder mask to enhance durability and prevent cracking due to heat expansion during high-volume, cost-sensitive assembly processes.

Typical applications include:

- Vehicle Tracking and Fleet Management Systems
- Wearables
- Navigation Devices

The DSGP Series can be manufactured in a TS16949 first-tier automotive-approved facility and tested to AEC-Q200 certification if required. Further to this, full PPAP and IMDS documentation can be provided upon request. Please discuss your quality and reliability requirements with our team prior to ordering.

Taoglas also offers custom tuning services based on minimum order quantities, contact your regional Taoglas customer support team for further information and support.

2. Specification

GNSS Frequency Bands					
GPS	L1 1575.42 MHz	L2 1227.6 MHz	L5 1176.45 MHz

4. Packaging

200 pcs/ Reel/ Vacuum bag

200 pcs / Box
Box: 350x340x67mm
Weight: 1.86 $\pm$ 3% Kg

800 pcs / Carton
Carton: 370x370x300mm
Weight: 8.2 $\pm$ 3% Kg

5. Antenna Integration Guide

The following is an example on how to integrate the DSGP184B into a design. This antenna has 10 pins, where one pin is used for the RF Feed. Taoglas recommends using a minimum of 50x50mm ground plane (PCB) to ensure optimal performance.

Top view of PCB reference design.

5.1 Schematic and Symbol Definition

Above is a 3D model of the DSGP184B on a PCB reference design.

The circuit symbol for the DSGP184B is shown below. The antenna has 10 pins as indicated below.

Pin	Description
1	RF Feed
2-10	Ground

5.2 Antenna Footprint

Pin	Description
1	RF Feed
2-10	Ground

5.3 Top Solder Paste

5.4 Top Solder Mask

5.5 Copper Clearance for DSGP184B

The footprint and clearance on the PCB must comply with the antenna's specification. The PCB layout shown in the diagrams below demonstrates the DSGP184B clearance area. The copper keep out area applies to the top layer and all internal layers.

There should be a 3.5x3mm copper clearance area around RF Feed pad.

5.6 Antenna Integration

The DSGP184B should be placed in the centre, as close to the edge on the long side of the PCB as possible, to take advantage of the ground plane. The RF trace must maintain a 50 Ohm transmission line. Ground vias should be placed around the RF trace.

DSGP184B antenna mounted on a PCB reference design, showing transmission lines and integration notes.

5.7 Final Integration

The top side image shown below highlights the antenna transmission line. Taoglas recommends using a minimum of 50x50mm ground plane (PCB) to ensure optimal performance.

6.7 Axial Ratio

7. Radiation Patterns

7.1 Test Setup

Chamber Test Set-up

7.2 Patterns at 1575 MHz

8. Solder Reflow Profile

The DSGP184B can be assembled by following the recommended soldering temperatures are as follows:

*Temperatures listed within a tolerance of +/- 10° C

Smaller components are typically mounted on the first pass, however, we do advise mounting the DSGP184B when placing larger components on the board during subsequent reflows.

Note: Soldering flux classified ROL0 under IPC J-STD-004 is recommended.

Changelog for the datasheet

SPE-25-8-114 – DSGP184B

Revision: A (Original First Release)	
Date:	2025-04-07
Notes:	Initial Release
