

DR22C SERIES

DIN RAIL MOUNT SSR ASSEMBLIES

Nova22 DR22C Series are last generation DIN Rail mount Solid State Relays in a 22.5mm wide industrial package. These SSRs come with an integral low depth heat sink and a robust back-to-back SCR output rated for up to 32 Amps at 600 VAC. This provides users with a compact solution to switch small and medium AC loads, allowing to reduce cabinet space without sacrificing performance. These powerful and ready to use SSRs are perfect for applications where the depth of the control panel is limited, and they are UL and TUV approved and CE compliant.

INSTALLATION INSTRUCTIONS

Please read all installation instructions before using your DR22C Series Solid State Relay (SSR).

- Install the relay on the DIN Rail (as shown in fig. 1)
- Maximum recommended terminal screw torque load terminal: 18-20 lb-in (2.0-2.2 Nm)
- If multiple units are installed be sure to follow derating curves
- To achieve maximum ratings, there must be a minimum spacing of 0.89 in (22.5 mm) between the devices in free air (as shown in fig. 2)
- Recommended wire sizes as shown in TABLE 1

WARNING! Removing product from 35 mm rail incorrectly by not using the appropriate tool would damage the latching system.

Protective Earth Connection	
	<p>Protective Earth (PE) screw type recommended is 10-32 UNC standard not provided with SSR. Through the use of a DIN rail ground (protective conductor) terminal block, the DIN rail itself can be used as the grounding bus bar. In this case, the zinc plated steel material used for the DIN rail clip of DR22C models, permits a secure path to ground and avoid the need of a further PE connection.</p>

GENERAL NOTES

- (1) All parameters at 25°C unless otherwise specified.
- (2) Output will self trigger between 900-1200 Vpk, not suitable for capacitive loads.
- (3) High inductive loads requires nominal control voltage; AC input models only.
- (4) Increase minimum voltage by 1 V for operations from -20 to -40°C.
- (5) For ambient temperatures above 40°C the maximum control voltage must not exceed 220 VAC/VDC.
- (6) Turn-on time for Instantaneous turn-on versions is 0.1 msec.
- (7) AC input models operating range is -20 to 60 °C.
- (8) For single surge pulse $T_c=25^\circ\text{C}$; $T_j=125^\circ\text{C}$. For AC Output SSRs, AC RMS value of surge current equals the peak value divided by $\sqrt{2}$ (1.414).
- (9) Minimum spacing to obtain max. current is 22.5 mm between adjacent units.
- (10) Test made with a unit fixed between DIN RAIL Stoppers. Multiple devices mounted close each other, results may vary.
