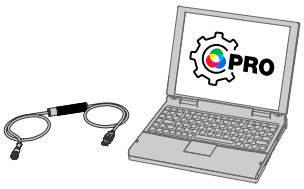
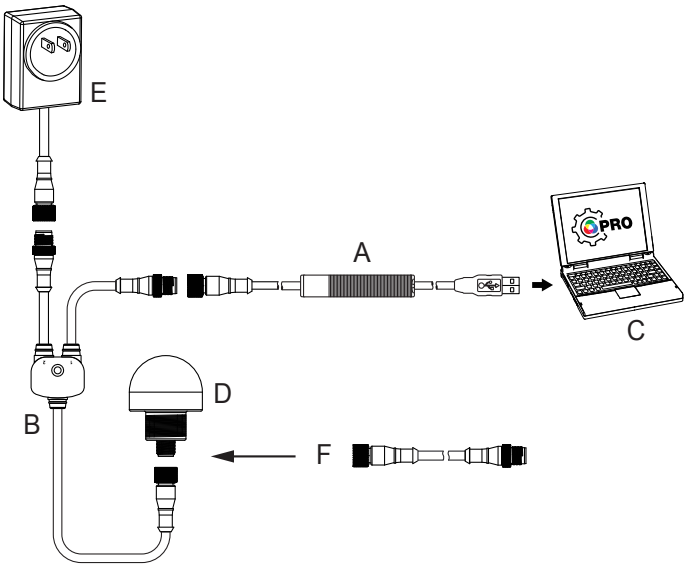
Chapter 3 Pro Editor



Use Banner's Pro Editor software and Pro Converter Cable to create custom configurations by selecting different colors, flash patterns, and animations. For more information visit www.bannerengineering.com/proeditor.

Full Preview Connection (Required)

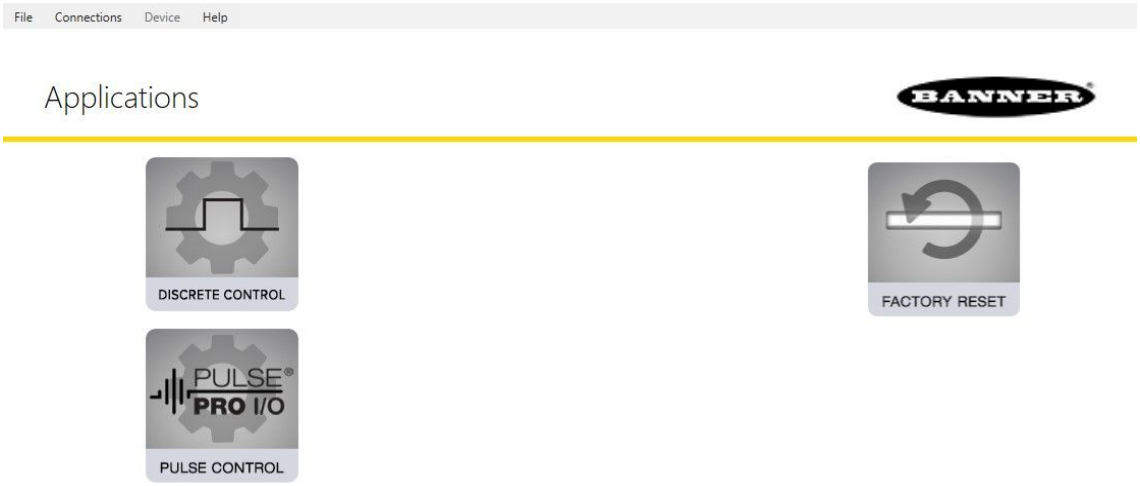
The full preview connection must be used for the K50 Pro Indicator.



A = Pro Converter Cable (MQDC-506-USB)
B = Splitter (CSB-M1251FM1251M)
C = PC running Pro Editor software
D = Any Banner Pro Series-enabled device (K50 shown)
E = Power Supply (PSW-24-1, PSW-24-2, or PSD-24-4)
F = 8-Pin to 5-Pin Double-Ended Cordset (MQDC-801-5M-PRO), required for 8-Pin models

K50 Pro Editor Program Options

When the K50 Pro device is connected to Pro Editor, the software displays two application tiles for Discrete Control and Pulse Control:



Discrete Control

Selecting the Discrete Control tile displays three I/O State tiles:

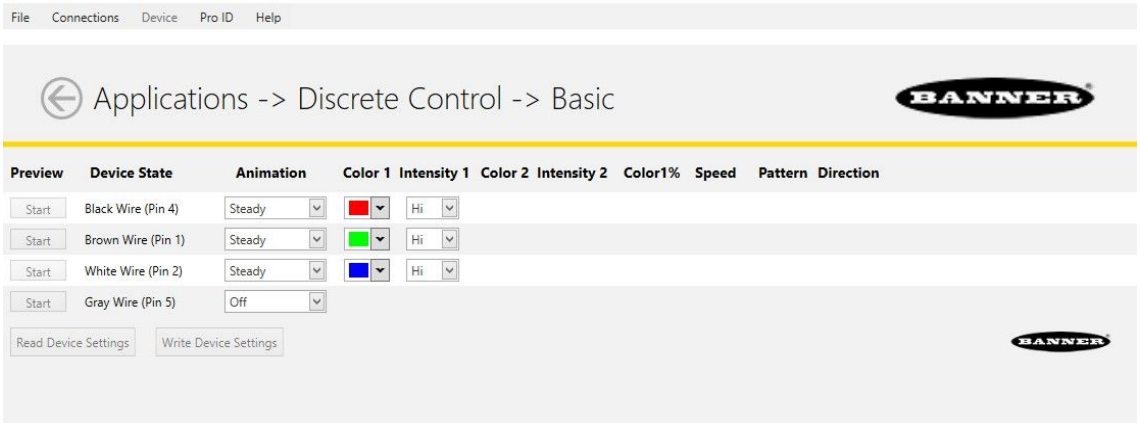
- Basic
- Advanced
- I/O Block

Discrete Control also contains the Pro ID function, accessed through one of the three I/O State tiles.

Basic I/O State

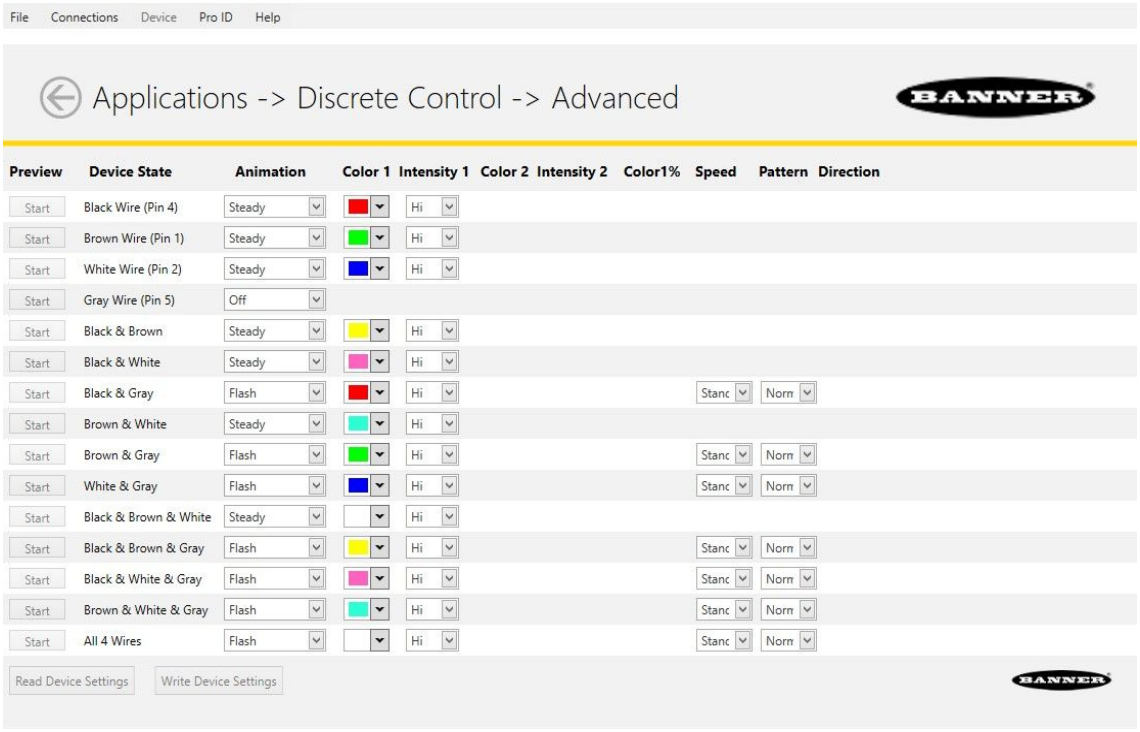
Basic four-state control. Configurations made in Basic I/O State assign one wire to one state, with the following override control:

- Pin 1 (Brown) overrides Pin 4 (Black)
- Pin 2 (White) overrides Pins 1 and 4 (Brown and Black)
- Pin 5 (Gray) overrides Pins 1, 2, and 4 (Brown, White, and Black)



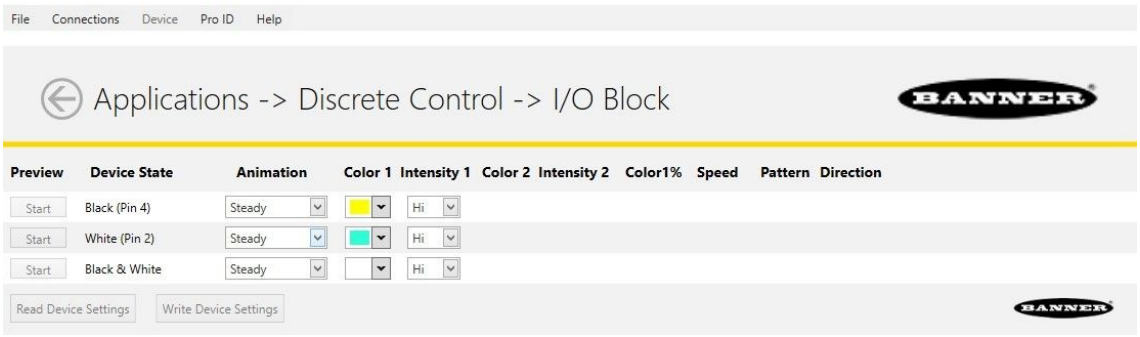
Advanced I/O State

Advanced, default I/O state, with 15 state options for maximum configuration ability. Configurations made in Advanced I/O State assign binary wiring combinations of all valid inputs to each state.



I/O Block I/O State

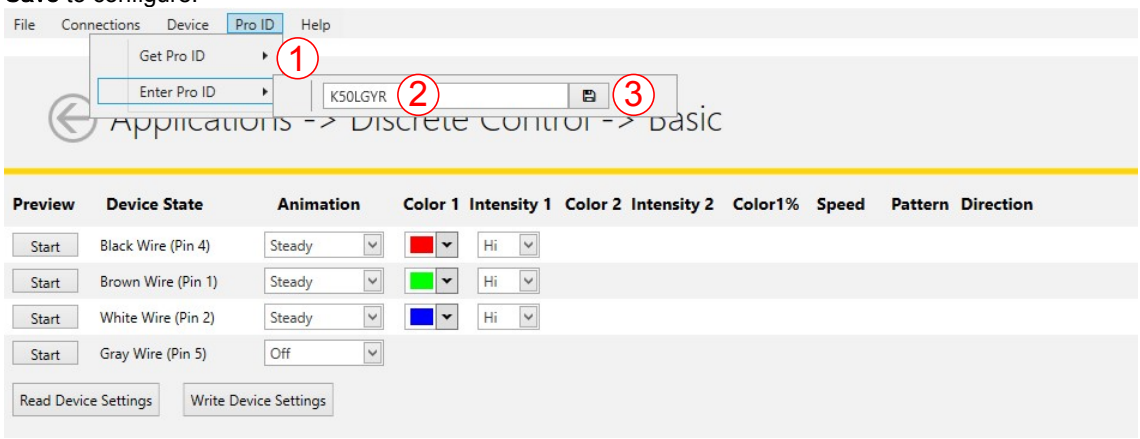
Three-state control for use with I/O block. Configurations made in I/O Block assign states to the black, white, and combination of black and white wires for use with I/O blocks, for which power (brown) and common (blue) are always on for five-pin connections.



Pro ID

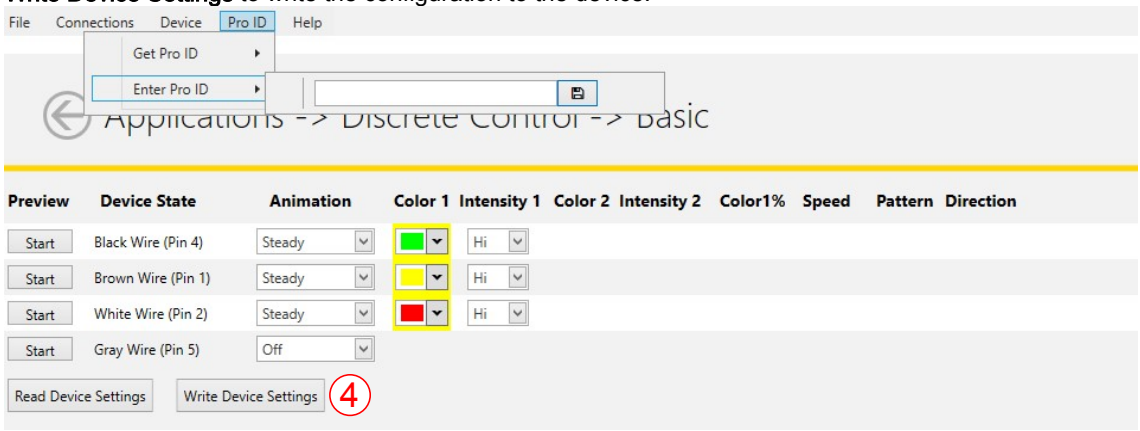
The Pro ID function allows the user to enter a known K50 model to configure a K50 Pro device automatically. The user must be in one of the three Discrete Control > I/O State tiles to access this menu.

1. In the top menu, navigate to **Pro ID › Enter Pro ID**.
2. Enter the model number of the known K50 model that you want to replicate. Do not include the input or connection type from the model number.
   For example: Model number K50LGYRPQ should be entered as K50LGYR.
3. Click **Save** to configure.



The configurations from the K50 model are applied to the settings and are highlighted in yellow (see image below).

4. Click **Write Device Settings** to write the configuration to the device.



Pulse Control

Selecting the Pulse Control tile displays up to sixteen states that correspond to input frequencies on the white wire. The number of states (1) and input characteristics (2) are user-defined. Ranges are calculated (3).
