

250W CONVECTION COOLED | 500W FAN COOLED

AC-DC POWER SUPPLIES

The GCU500 is packaged in a 3.3" x 6.5" x 1.55" package and achieves EN55011/32 Level B conducted emissions compliance whilst maintaining very low earth leakage currents, making it suitable for a wide range of 1U and other industrial, IT and medical applications.

The series has single output versions from 12V to 48VDC, dual-fusing for compliance with IEC60601-1 and features minimal waste heat as efficiencies reach 93%. The GCU500 delivers up to 500W of power over an operating range of -40°C to +70°C and offers remote on/off control and power fail signal along with 5V standby and fan supplies.

Features

- 250W convection and 500W forced-cooled ratings
- 5V standby output
- Universal 80 to 264VAC input
- IT and medical safety approvals
- -40°C to +70°C operation
- Power fail, remote On/Off and remote sense
- Class B emissions
- 3 year warranty

Notes:

1. Overall Vfan tolerance 10.8-13.2V

2. For end fan version add suffix -EF to model number.

3. Forced cooling requires 10CFM.

Signals & Controls

Signals		Notes & Conditions
Power Fail		TTL Compatible, pin 6. Provides ≥5ms warning of loss of output and/or AC failure
Standby Supply		5VDC/0.2A referenced to -Vout supply present when AC applied
Remote On/Off (-R models)	Inhibit	The inhibit lo, should be pulled below 0.4V to switch V1 and Vfan off. Open circuit or >4V to switch on (see fig. 7)
	Enable	With the inhibit lo (pin 4) pulled low as detailed above, connecting inhibit HI to inhibit LO will enable V1 & V fan output. (see fig. 8)
Remote Sense		Compensates for 0.25V per lead, 0.5V total

Thermal Considerations

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of direct air flow). See below for component locations.

Temperature Measurements (at Maximum Ambient)	
Component	Max. Temperature °C
T1 Coil	120°C
L3 Coil	120°C
Heatsink	110°C
C11	105°C
C47	105°C

Service Life

The estimated service life of the GCU500 is determined by the cooling arrangements and load conditions experienced in the end application. Due to the uncertain nature of the end application this estimated service life is based on the actual measured temperature of a key capacitor within the product when installed by the end application.

The graph below expresses the estimated lifetime of a given component temperature and assumes continuous operation at this temperature.
