

Power Inductor
Automotive Grade
AMDC Series

Overview

AMDC series Inductors filter the high-frequency switching noise generated by the PWM (Pulse Width Modulation) signals in Class-D amplifiers, ensuring clean audio output. Inductors help in maintaining a stable load for the Class-D amplifier, ensuring optimal performance across varying speaker impedances.

Benefits

- 1. Automotive grade available
- 2. Efficient Filtering of High-Frequency Noise
- 3. 2 in 1 molded power inductors for compact designs for space optimization
- 4. High saturation Current

Applications

- 1. Automotive Audio Systems: Efficient sound systems in cars, including EVs.
- 2. Professional Audio Equipment: Amplifiers for live performances and studio systems.
- 3. Home Audio Systems: High-fidelity home theater systems and smart speakers

AMDC001010J0220MQA	22	20	100kHz,0.5V	3.2(3.6)	7.3(8.5)	56(46)	220

Note:

- Operating temperature range -40°C to 125°C.
- I_{sat} for Inductance drop 25% from its value without current.
- I_{rms} for a 40°C temperature rise from 25°C ambient.
- The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions. Circuit design 125°C under worst case operating conditions. Component placement, PCB trace size and thickness, airflow and other cooling provisions all affect the part temperature. Part temperature should be verified in the end application.
- Absolute maximum voltage 30V DC. (Based on test method, it may not be the same under different application, it is recommended to verify first.)
